Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

WOC Club Maintenance Director will have this information

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

As a new pilot, I wanted to gain practical experience with soft/short field landings, but for safety purposes, only with an experienced CFI pilot to provide guidance at a familiar 'short field' airfield to the instructor. March 1 was intended as a crosswind landing practice with a stop at a grass airfield to get experience with soft/short field landings. Winds did not materialize and it was fairly calm, so the instructor suggested instead to go to a short field on our way to the soft grass field airfield. A flight plan was developed for an instructor led short field landing practice at BQ1 and then on to Derby (N26) for soft field instruction. After pre-flight inspection procedures were completed, we departed from runway 3 without incident, and departed the KTTA pattern. Wind was reported as calm during the in-range checklist call to AWOS-KSOP, so we decided to land at runway 13 and discussed entry into the pattern at a 45 degree angle to downwind runway 13, allowing plenty of distance from the airfield and long pattern legs to set up the short field landing with plenty of time to set up. No other traffic was in the pattern. We landed on runway 13 without incident. After landing we taxied to the end and turned around for a short field departure from runway 31 as winds were still calm and no other traffic was in the pattern. The instructor suggested a landing at 31, again using a wide pattern to allow plenty of time. I was lined up on final for a centered approach to runway 31, but verbal instructor inputs and inputs on the controls towards the right on final resulted in an approach that was too far right, striking a tree at approximately 50'-60' AGL and damaging the right-wing tip. As the pilot, I was unclear why the approach was far right and had deferred to the instructor's experience at the field for several trees to avoid on the left side. In my experience here (one time landing at BQ1 before), I had remembered trees were very close to the plane on the left and that close tree avoidance was necessary, so I assumed that is why we were on a path right of the centerline of the runway. The instructor explained that the sun was setting and was in his eyes and no leaves on the tree made the tree difficult to see to his right.

Landing was immediately aborted and a go around procedure implemented. No signs of damage were evident in the controls. An immediate return to KTTA was determined to be the safest option as it is a wide, long runway with no obstacles compared to BQ1 and it is a larger facility with access to potential help/services if necessary. Wind was reported as calm during the in-range checklist call to AWOS-KTTA. The active runway was 21 according to CTAF traffic reports, so we entered the pattern mid-field at KTTA for a landing on runway 21 without incident. We taxied to the south ramp location we originally left from, shut down and secured the plane and contacted club officials and club maintenance staff for further instruction.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

Review all obstacle avoidance and flight path plans together to develop a clearly communicated plan with the instructor prior to attempting an airport with close obstacles to avoid. That way, my lack of experience with the appropriate approach path would have been mitigated by a clearly communicated plan and if that plan was not being executed as discussed, the landing would have been aborted.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
