☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Aircraft Explosion

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Front nose gear appeared to have collapsed after impacting the water. Damage to one of the propellers. Damage to left side of the elevator. Half of the aircraft was submerged under water.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The flight in N778WT departed SC65 en route to KOPF at approximately 7:30PM on March 31, 2026. The days prior to March 31st, we kept watch on raining conditions at the field and there was none observed. Prior to landing at SC65, an overflight of the airport was conducted to assess field conditions. The runway surface was observed to be clear of obstacles and wildlife. A complete pre-flight inspection of the aircraft was completed in accordance with the aircraft's Pilot Operating Handbook and no issues were found.

During departure, while performing a soft-field takeoff, directional control along the vertical axis was lost, resulting in the aircraft veering to the left. I felt a bump from the left main gear and a very sudden and hard turn to the left. Full right rudder was applied, and engine power was reduced in an attempt to counteract the left-turning tendencies. These corrective actions were insufficient to maintain directional control of the aircraft. After impacting the water on the left side of the runway, I put the mixture in the cutoff position. We opened both doors and exited the aircraft in about knee deep water. After getting out of the water, I returned to turn off all the switches and grab my bag. The local police and medical services arrived on the scene to make sure everybody was safe. No injuries occurred. They took their statements and another police officer from the Charleston International airport arrived as well.

The route for the day included KOPF-KLRO-SC65-KOPF. I received an outlook weather briefing the night before from Flight Services. Before departing KOPF to KLRO I got a weather briefing using ForeFlight. Before departing KLRO to SC65 I got an additional weather briefing using ForeFlight for the route back. At the time of departure, the aircraft had 88 gallons of 100LL fuel onboard. The calculated takeoff weight was 3,572 pounds, which was within the aircraft's operational limitations. Based on prevailing conditions, including sea level pressure, ambient temperature, a dry grass runway surface, and the air conditioning system turned off in accordance with the aircraft's Pilot Operating Handbook, the ground roll was calculated at 1,874 feet.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
