Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

The left outboard wing was punctured. No damage to tanks or aircraft systems. Just the skin of the aircraft was dented and punctured and the bird was lodged in the wing.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The student and Instructor (myself) were conducting a lesson on navigation. The student was booked in for his CPL (Commercial Pilots Licence) the next day. The lesson was more of a review and last minute pointers before his examination. The lesson was successfully completed and we had begun to return to vero. About 18nm out from KVRB, the student began his ABC flow (Atis, Brief and Checklists). IP tuned and identified the atis (METAR KVRB 012053Z 11011KT 10SM FEW032 SCT042 BKN049 24/17 A3017 RMK AO2 SLP215 T02440172 58020=). Around 14nm from Vero, the flight crew were running the approve checklist procedures for before landing. This had the student veriing the fuel timer, lights on as needed, mixture rich, alternate air off and overall a verbal breifing of what to expect from tower and how they plan on entering the class D. Shortly after myself (the IP) was aksing the student abotu his altidue as we were descending throuh 1400ft. TP was discussing about IFR traffic and getting ready for pattern entry. Not long after at about 1650 EST (Local) or 2150 UTC just prior to calling ATC for entry into the class D; the student looked up in a scan for traffic and aksed about a possible target (bird or plane) high toour 12 O'clock. As I looked up the bird quickly dove from almost right above us, horizontally and into the left outboard of the wing. I instructed the student to level off and switch from left to right fuel tank. A quick scan of the engne instrumentation revealed no issues or warnings. Looking out to the left wing, no fuel, smoke or fire. All there was was a medium size bird, later identified as the Anhinga or Snakebird, lodged in the outboard of the left wing. There was no other damage to persons, propellers, engines or windscreens. The IP (myself) asked of the controlability issues. The TP claimed it flew fine and both crew noticed little no change in the performance of the aircraft. I then instructed the student to continue as the pilot flying hvaing handled and adjusted to the strike and I would take the coms and further checklists. At about 9nm I had made a second radio call to be heard which went: Vero Beach Tower, SFY 659 is 9nm to the SW with infomation ____ and be advised we had a bird strike on the left wing, no issues at this time. Tower orginally instructed us to enter a midfield right downwind for 12R and then shortly ammended to extended right base for 12R. Shortly after we were cleared to land and the student landed without incident. The plane was taxied to the ramp and shut down and sqwaked for maintence.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
