NARRATIVE HISTORY OF FLIGHT (Please type or print in ink.)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I was actually planning on selling this aircraft because I don't get to fly it enough due to my busy schedule and the distance away from home I have to keep it due to the lack of nearby hangar space. I was flying this day just to keep my 90 day landing currency. I took my daughter's boyfriend along as a passenger. We left Tri-County and flew to Crestview because I wanted to check out the ILS auto-coupling on the Auto-pilot since I rarely use it. I contacted Eglin approach for flight following for the practice approach (not IFR). I did a normal touch and go out of this practice ILS. The pattern was busy.

I almost elected to keep the gear down for the VFR pattern but decided to raise it since the pattern was busy and I didn't want to get distracted and overspeed it. There was a 172 in front of us, much slower of course, so I spent quite a bit of my attention keeping track of this aircraft so I wouldn't get too close, and of the other aircraft in the pattern. The 172 pilot flew a much wider base and longer final than was necessary (a ridiculous trend I see from a lot of pilots) especially considering he had a much faster aircraft right behind him. I extended downwind to approximately 2.5 miles so as to not over-run the 172.

I normally put the gear down on downwind, then check multiple times on downwind base and final for a positive gear down indication. All the distractions of the many aircraft in the pattern and especially the slow 172 in front of me disrupted my normal habit pattern. It still completely baffles my mind though that I didn't put the gear down or check that it was down at least once because I am normally VERY deliberate about this.

Touchdown in the Velocity already feels very low to the runway and this one felt no different until the last second. I heard the propellor blades hit and then the scraping of the belly on the runway and knew instantly what I had (not) done. Deceleration was not rapid, and as I got slower, I decided to clear the aircraft off the runway. I used the rudder pedal and the aircraft responded and I managed to steer it off the paved surface between the runway lights. I then made a radio call on the airport frequency notifying the aircraft in the pattern what happened and that the runway was clear.

OPERATOR/OWNER SAFETY RECOMMENDATION (How could this accident/incident have been prevented?)

There was no more training or knowledge that would have made a difference here. I was fully trained, experienced and able to handle this situation perfectly well. I let distractions keep me from my primary duty to operate the required aircraft systems properly for a safe landing.

The aircraft has normal green gear down indicator lights. The builder of this aircraft (not me) included a gear warning horn that sounds if the gear is not down below a certain speed. However, it was not wired through the intercom system and with modern noise cancelling headsets, this warning sound is rarely audible.

Having this wired through the intercom would most likely have broken this chain of distraction. Also, I would consider putting a warning light on the glare shield that lights at the same time the warning horn is activated. Having it on the glare shield in direct line of sight looking out at the runway would also have broken this chain of distraction I feel.
