Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Propeller damage and nose collapsed

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The aircraft was on final approach for landing at Lanett Municipal Airport (7A3) under visual meteorological conditions.

I was high and came in a little faster than I would normally. I floated in ground effect but overall the landing was uneventful, and the aircraft touched down on the runway. During the landing rollout, while decelerating, directional control was lost. Corrective control inputs were applied; however, the aircraft departed the paved surface.

The aircraft subsequently struck a taxiway sign and came to rest off the runway. The aircraft remained on the ground at all times.

There were no injuries to the occupants. The aircraft sustained damage to the propeller and nose landing gear.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

The event could have been prevented through earlier and more precise control of directional alignment and airspeed management during the landing and rollout phase. Increased attention to maintaining centerline tracking and stabilized control inputs throughout deceleration would have reduced the likelihood of loss of directional control.

Following the event, I have taken corrective action to ensure this serves as a significant learning experience. I have conducted additional flight training focused specifically on landing technique, directional control. This included multiple supervised flights emphasizing stabilized approaches, proper control inputs during rollout, and maintaining runway centerline.

I have also reviewed standard operating procedures and best practices for landing performance and control, and have reinforced the importance of proactive control inputs and situational awareness during all phases of landing.
