Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Right wing damaged, bent lift struts, bent tubing at wing/fuselage joint, left main gear bent, one prop blade cracked

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

KFRR 3:15pm

Local flight

Warmed up the engine to operating temperature, taxied to runway 10, performed mag check, then took off. I initiated a slight left bank to avoid hills to my right. Engine abruptly died and I immediately searched for a place to land. Seeing none, I continued my left turn to try and land on the taxiway. I cleared the power lines and when I flared for landing, my gear went through a decorative wooden fence near the edge of the taxiway, and the right wing clipped a 6x6 wooden sign post that spun the aircraft sideways as it touched down, collapsing the left main gear. I skidded about 40' on the tarmac and came to a halt. I made the aircraft safe by shutting down all systems and I exited the aircraft.

I was unhurt. The fire department and police came. There were no fuel or oil leaks.

It is my belief that the fuel selector valve was not in the correct position for flight.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

Relocate the fuel selector valve to a more visible position (currently its behind the seats and awkward to see and access).
