Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Minor warping in the firewall, minor damage to the nose wheel, prop strike

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

During a dual instructional flight, my student and I elected to conduct grass field landing practice at Laney's Airport (N92). Prior to arrival, we obtained weather reports from nearby airports, which indicated winds from the south-southwest at approximately 3–4 knots. I demonstrated a landing on Runway 5 followed by a takeoff on Runway 23. The student then completed one landing and takeoff without issue. At the student's request for additional practice, I elected to transition to operations favoring a headwind component and planned a landing on Runway 23. After landing on Runway 23, we taxied to the approach end of Runway 05 for departure. During the takeoff roll on Runway 05, the aircraft reached approximately midfield and entered ground effect with an indicated airspeed of approximately 40 knots. Simultaneously, the vertical speed indicator showed approximately -100 feet per minute, indicating insufficient climb performance. Recognizing the aircraft was unable to safely continue the takeoff, I made the decision to abort. I reduced power to idle and pulled the mixture to shut down the engine. Due to a significant drop-off at the departure end of Runway 05, continuing straight ahead posed a higher risk. Additionally, individuals were observed off the left side of the runway, limiting available options. To mitigate impact severity and avoid the drop-off, I directed the aircraft into a slight left deviation (dogleg) while decelerating. During the rollout, the propeller contacted the asphalt after engine shutdown and while not under power. Once the aircraft came to a complete stop, I secured the aircraft and ensured both occupants exited safely without injury.
