

NATIONAL TRANSPORTATION SAFETY BOARD • PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT Use this form (Form 6120.1) to report civil and public aircraft accidents and incidents

BASIC INFORMATION
Accident/Incident Location

 Nearest City/Place: Sanford State: ME

 ZIP: 04073 Country: USA

 Latitude: N4323.8 Longitude: W07042.4

(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

 Date: 07/27/2026 Local Time: 11:31
 mm/dd/yyyy HH:MM

 Time Zone: EDT

 Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

 Registration Number: N291CA

 Manufacturer: American Champion

 Model: 7GCBC Citabria

 Serial Number: 1373-2004

 Year of Manufacture: 2,004

 Amateur-Built: ☐ Yes ☒ No If Yes: ☐ Original Design ☐ Kit/Plans

Make: _____

- ☐
- IFR-Equipped and Certified
-
- ☐
- Commercial Space Flight
-
- ☐
- Unmanned Aircraft

 Maximum Gross Weight: 1,800 lbs.

 Weight at Time of Accident/Incident: 1,790 lbs.

 Number of Seats: 2 Flight Crew Seats: 1

 Cabin Crew Seats: 0 Passenger Seats: 1

 Number of Engines: 1

Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Right main wheel separated from landing gear. Right main landing gear bent under the undercarriage. Right wing bent/ buckled. Right elevator crumpled. Ripples in skin underside of fuselage.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

During the pilot under instruction's first training flight (0900: KSFM-KSFM) for the tailwheel endorsement he exhibited excellent use of the rudders during a long taxi drill and very good directional control during 3-point takeoffs as well as during basic aircraft handling and airwork; however, during landing rollout he had extreme difficulty with overcontrolling the rudder. This tendency was thoroughly debriefed after the first training flight.

During the second training flight that followed the same day (1100: pattern work only, KSFM-KSFM) it was agreed upon and briefed that the instructor would demonstrate another 3-point landing and rollout for the pilot under instruction followed by his own attempt taken to a full stop. After the demonstration pattern and 3-pt landing the pilot under instruction flew the 3-pt takeoff and an excellent pattern as briefed; 80MPH abeam, 2 notches of flaps, 70 MPH base leg and 60MPH on final. Airspeed on final was a little fast (75MPH) but acknowledged and corrected. We crossed the threshold at 65MPH and arrived at the flare on speed (60MPH), where the airspeed was bled off as the aircraft settled to the ground in a 3-point stance with minimal lateral drift. The landing itself was excellent; however, the pilot under instruction introduced right rudder and began a drift to the right that the instructor thought was small enough that it could be corrected with rudder until suddenly, the pilot under instruction overcorrected with what felt like full left rudder or inadvertent brake application that induced a severe swerve to the left. The hard over was so severe that the instructor did not command a go-around as the aircraft was already essentially out of control. The crew rode the aircraft to a violent stop facing the opposite direction to the landing, straddling the runway edge pavement with the tail in the grass.

The airplane was clearly disabled. The instructor commanded the pilot under instruction to complete the shutdown checklist while making the radio call to other aircraft in the landing pattern that the runway was closed due to the disabled aircraft. Both pilots exited the aircraft and confirmed that neither pilot was injured in any way and called Southern Maine Aviation Dispatch via cell phone to initiate the airplane recovery and mishap investigation.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

This accident could have been prevented if the flight instructor/ PIC had accepted less tolerance for even the slightest directional control deviation on the landing rollout. After touchdown, as soon as the pilot under instruction developed a slight drift to the right, the flight instructor/ PIC could have commanded an immediate go-around as had been briefed and practiced.

Recommendation: The instructor could set, brief and utilize a pre-established personal limit for an acceptable lateral deviation on the runway to know in advance what conditions will lead to a go-around or taking control of the aircraft.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
