Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

The aircraft received damage to the left wing tip leading edge. About a 6 by 5 inch dent to the skin. In addition it also received scratched along the leading edge of the left wing which seem to just be scratched paint.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On July 24, 2026, I conducted a flight in N44704 from KPIE with a student for familiarization training and grass-strip operations at 48X. The aircraft was preflighted and appeared airworthy. We departed KPIE at approximately 0747 local and landed uneventfully on Runway 07 at 48X.

After a full-stop landing, I initiated a soft-field takeoff from Runway 07 with the intention of demonstrating the maneuver to the student before departing northbound. During the takeoff, I remained in ground effect longer than intended and initiated a left crosswind turn at a low altitude. There was a light breeze coming from 120 that I believe slightly pushed the plane's track to the left which can be seen on the flight aware track as I departed the runway. I had the sun in my eyes and it made me disoriented. The aircraft was not high enough and as my wing dipped to the left during the turn, the aircraft's left wing contacted a barbed wire fence located near the departure path.

After recognizing the contact, I returned and landed on Runway 07 at 48X without further incident. During a post-landing inspection, I observed barbed wire attached to the aircraft's wing. I removed the wire from the aircraft and moved it clear of the operating area to eliminate any potential hazard.

Following my inspection at 48X, I observed what appeared to be limited damage to the aircraft. I performed a full preflight inspection, specifically with strong attention to detail to the flight control surfaces. All flight control surfaces were in normal working order. I then elected to return the aircraft to KPIE. The flight back to KPIE was completed without further incident. After landing, I taxied to Sheltair and notified the aircraft owner of the damage.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

To avoid a similar event in the future, I will ensure that soft-field takeoffs are conducted in accordance with the manufacturer's recommended procedures and established training standards. I recognize that during this event I remained in ground effect longer than appropriate and initiated a left crosswind turn before establishing a safe altitude and obstacle clearance. As I began the turn, the aircraft's left wingtip struck a barbed wire fence.

I am also committed to maintaining ground effect only as long as necessary to accelerate to the appropriate climb speed, establish a positive rate of climb, and ensure adequate obstacle clearance before initiating any crosswind turn. I will also place greater emphasis on maintaining visual awareness of obstacles and surrounding terrain throughout the departure.

Since this event, I have conducted a thorough self-assessment of the circumstances that led to the occurrence. I recognize that the primary factors were my decision to remain in ground effect

longer than appropriate following a soft-field takeoff, initiating a turn before establishing a safe climb, and allowing reduced visual cues from sun glare to influence my judgment.

There were several factors involved, however, in similar conditions, I will take additional precautions to mitigate the effects of glare (ensuring I have sun glasses available) and will discontinue or modify the maneuver if adequate visual references cannot be maintained.

Additionally, to reduce the likelihood of a similar event, I have taken the following corrective actions:

- Re-reviewed the Pilot's Handbook of Aeronautical Knowledge (PHAK), with particular emphasis on aeronautical decision-making (ADM), risk management, situational awareness, collision and obstacle avoidance, and instructor responsibilities.
- Re-reviewed the Airplane Flying Handbook, specifically the chapters covering normal and soft-field takeoff techniques, emphasizing the

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
