NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Departed SRQ @ 1440 on 3/12/15 after checking
 avox and getting clearance from tower for a VFR flight to 48X at 1500 feet MSL
 with my friend Henry Howley in the passenger seat front. Noticed after 5 minutes
 into the flight that the amp meter had gone from charging to discharging and
 soon returned to the charging state. I landed at 48X and stayed for a while and
 had snacks. I looked at my cell phone for the time and noticed I was going to
 be late for my next appointment. I felt rushed so I didn't use my normal check
 list for a prop pull start. I did not want to use the electric starter as I wanted
 to save the battery power for the radios and other electrical equipment for
 the flight back to SRQ. My friend Henry had been briefed on how to hold the brakes
 on. When I pulled the prop through to start it, I did not realize that the throttle
 was pushed fully in. When the engine started it went to full R.P.M. and
 started moving forward fast. I was able to grab on to the left strut and try to
 grab for the door handle to get in and turn off the magnetos but couldn't get in.
 The plane did two left tight circles and headed toward the end hanger. I was
 thrown off the strut from centrifugal force and the plane impacted the hanger
 with the right wing and came to a stop with the left wing hitting the propeller
 of Beech N8844M that was in the open hanger. My plane stopped I reached in and
 pulled the throttle back and shut off the magnetos. Henry was wearing the 4 point
 seat belts and was shaken up but we were both unhurt.

RECOMMENDATION (If more space is needed, continue on separate sheet)

Operator/Owner Safety Recommendation

Would have been good to use the check list for propeller starting
I would have then not missed the throttle position

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
