Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Damage to 31 fabric panels of balloon envelope as a result of contact with burner flames during landing maneuvers. Range of damage to panels from small (<0.5" holes) to complete melting. Overall panels represent approx. 8% of total panels on balloon. Balloon did not sustain any damage to basket or associated systems. ****PLEASE SEE ATTACHED SHEET PROVIDING DIAGRAM OF DAMAGED PANELS****

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

>Chronological overview:

Launch Time: 07:05, Sportsman Airpark, Newberg, OR 97123

Passenger flight with 2 passengers. Upon initial landing approach, pilot assessed landing field size and began descent in general direction of selected field. Once pilot approached field, realized there was livestock and selected next field (final landing site). Pilot activated burners to increase altitude in order to clear trees between current and intended field. Once trees were cleared, applied a vent in order to descend into field for purpose of landing. On release of vent, right wrist became entangled in vent line and was subsequently freed. Once wrist was freed, pilot instructed passengers to assume landing positions. Pilot activated burners to slow descent, releasing burners prior to landing. Balloon basket made first contact with ground and bounced once, coming to rest 50 feet from initial landing spot. Pilot pulled parachute to deflate balloon after first contact with ground. 2 passengers sustained foot injuries while pilot was uninjured.

Landing Time: 07:50, [REDACTED] Sherwood, OR 97140

>Terrain:

Gently rolling hills along low ridgeline. Generally farmland with low density homes and farmland.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Passenger landing position: re-assessment of landing positions in balloon basket. Ensuring that passengers' feet are flat against basket floor.

Control line management: ensuring that ropes are not wrapped around any body parts. Operation should be to simply grab and pull
