4/21/2015

Beautiful morning. Not a cloud in sky in morning flight to Glasgow. Winds were up but down the runway. Worked and passed on flying around ~~20~~ home due to 17-24 kts wind but down runway at Glasgow (25). Later around 5 est went to airport. Showers in area but winds had slowed. Currently 8 kts from 24. Turned after departure and flew easterly toward Columbia. Could see mild showers between Glasgow and KAAS. At Columbia I was past the showers to the north and turned north and past south edge of Green River Lake I turned NW direct to KAAS. Listened to Atis and winds were 3 kts from 23. I entered Pattern for left base for 23. I was 4.1 miles from runway and added half flaps but kept adding power to maintain speed around 110. Checked Atis again and now winds were 11kts from 23. Everything was normal. A mile out I added remaining flaps. Crossed fence at 100 mph (normal). Crossed runway threshold at 90 and all normal. Entered landing flair and normal until something happened. Felt like the air sucked out from under plane and I hit hard on back gears, bounced and when it came down on front gear it buckled. I had called GUMPS out twice and had 3 green from shortly after turning final at 4 miles out. Gear buckled and nose went down. I was able to tap right brake and slide to right of runway in case more traffic would of needed to land.

I called Carl Watson and with back hoe we were able to lift the front end and pull plane to hangar.

Summary:

I feel winds must of shifted near the time I was in flair. Causing a fast change in pressure and taking lift from wings causing hard impact with runway.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I should of Keep Power in- Reduced Flair-
Used 1/2 Flaps and Flown to ground.
And not Tried to land with stall horn on
close to stall Horn!
