Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Damage to right wing including wrinkling of skin, damage to lower right engine cowl, and a wrinkle in fuselage near right horizontal stabilizer. Right main gear was removed from the fuselage. Prop strike with damage to prop.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The aircraft was fueled and preparations were complete to depart KLVJ (Pearland, TX), with the intended destination of KRQO (El Reno, OK). Following runup and systems checks the plane moved onto runway 32, which was at that time the active runway. Modest crosswinds from the left with a very slight headwind component generally prevailed, although the direction was variable. I didn't specifically note the time, but believe it was approximately 0940 LT.

Power was advanced and the aircraft began to accelerate down the runway. As the tail began to get light a combination of P-factor and crosswind began to move the nose of the aircraft to the left. I increasingly applied right rudder, but as the rate of left turn increased to what I believed to be the beginning of a ground loop I applied full right rudder, and supplemented with a brief stab of right brake. The aircraft stopped the swing to the left, but the right tire snagged the concrete and the aircraft swung right and departed the runway into the grass. I arrested the swing; however, the right landing gear snagged the edge of a ditch and spun the aircraft to the right. The aircraft came to rest along the right edge of 32 and perpendicular to the runway. The right main gear was about 25 feet from the fuselage.

Airport personnel made the appropriate immediate notifications. I later notified the NTSB regional office after the aircraft was removed from the runway.

There were no personal injuries. There was no property damage other than to the aircraft itself.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

1) I had received more than six hours of dual instruction in this aircraft; however, the aircraft at the time of the instruction was generally light (partial fuel and two occupants) and forward C.G. (nothing in the baggage compartment). The aircraft's response to rudder input was substantially different when loaded. My solo time in the aircraft was similarly in a light condition (full fuel but only one occupant and little baggage). While my flight experience seemed reasonable, with benefit of hindsight I should have gained more flight time with the aircraft at incrementally increasing weights and incrementally aft C.G. in order to experience rudder response in a loaded condition.

2) Early in the takeoff run, and prior to the incipient ground loop, when it became apparent that the rudder response was not what I expected it would have been prudent to pull power, abort the takeoff and reassess.

3) Consider crosswinds more carefully. If there is little to no headwind component (as in this case) it may be prudent to selectively place the crosswind from the right of the aircraft to operate in opposition to left-turning P-factor.

I do not know the manufacture date of the engine; however, according to aircraft logs it was original to the aircraft.

The ELT did not activate because deceleration was insufficient to activate the G-switch. It was a very low impact accident.

I do not remember the temperature, dew point or altimeter setting at the time of the accident. I did not write it down; however, sky was clear, visibility was good and weather (other than the crosswind) was not a factor. Weather for the intended route was VFR.

Note that some flight times (e.g., PIC and Rotorcraft) are estimates since I do not presently have my earlier logbook and my rotorcraft logbook with me for reference.

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE
