Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Scratches on tail tie-down ring, propeller blades bent and damaged at outer 1", major deformation to firewall, wrinkled belly skin, binding at control yoke.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

This accident occurred during the primary flight training of a student pilot on her first solo flight. It occurred on Whiteman Airport (KWHP) while the air traffic control tower was in operation. Runway 12 was in use with a left traffic pattern. After making a short flight out of the Class D airspace, the student pilot completed two landings with her Certified Flight Instructor (CFI) on board. The student pilot advised the tower that her instructor was going to get out. She dropped him off in the area of the Runway 12 run-up area at approximately 11:00 PDT. The student pilot announced ready for take-off at Runway 12, and requested left closed traffic. She was cleared for take-off and left closed traffic by local controller, Michael Evangelista. She flew the left traffic pattern and was cleared to land. Along with the landing clearance, the controller advised her of the wind and altimeter setting. Her initial touchdown was nosewheel-first and hard. The airplane bounced back into the air the "porpoised" 2-3 times before the student pilot was able to regain control and exit the runway. She requested to taxi back for take-off and was cleared to do so. Her second traffic pattern ended with a similar hard landing and bounced 3-4 times before she was able to regain control. Once she exited the runway, the controller suggested she terminate flight and return to the hangar. She complied with his suggestion and appeared to be able to taxi normally. She met with her CFI, Darcy Vernier. Mr. Vernier suspected that the airplane had suffered a tail strike. He subsequently had the airplane inspected by mechanics at Able Air, which is also on the field at KWHP. Inspection revealed that both the tail and propeller had contacted the ground and caused the damage listed above.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

This accident appears to have been the result of inadequate training of a student pilot. There was no record of prior training of the following maneuvers/procedures: cross-wind take-offs; cross-wind landings; windshear; wake turbulence; emergencies; equipment malfunctions; ground reference maneuvers; simulated engine-out approach; forward slips; or go-arounds. There is a notation in her logbook for her last flight lesson before the accident date. That notation (04/25/2015) indicated "hard landings". Of the two landings she made with her instructor on the accident date, only one was unassisted. She estimated a total of 2-3 unassisted landings prior to her CFI endorsing her for solo.
