Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible. Pilot report: On 5/10/2015 I departed (KEAT) VFR to Quincy Mun (80T) airport at 11:40am in a Citabria 7ECA for some landings. The flight was in light turbulence from small tight thermals on arrival I advised local traffic on 122.9 that I would enter a midfield to right traffic for r/w 90. Over the airport I noticed a 6-10 kt wind estm cross wind from the West (left) I advised local traffic that I was on a right downwind to r/w 90 and final for a stop and go landing. On final the approach was in light turbulence and crosswind from the left 6-10kt estm after a wheel landing to a full stop I taxied back to r/w 90 and advised local traffic I was taking off on r/w 90 for right downwind to r/w 90. On right down wind I advised traffic that I would do another stop and go landing on r/w 90 and also noted the wind was changing to a right direct cross wind from the south. While in the pattern there was light turbulence to short final with small light dust devils in the area. I advised traffic of a stop and go landing on final, and noted 6-10kt crosswind from the ESE. I completed a 3- point landing and taxied to r/w 90 for takeoff. I took off from r/w 90 with a crosswind from the ESE and entered a right downwind for runway 90 advised traffic of stop and go landing. Again light turbulence was felt in the pattern to short final with a 6-10 kt crosswind from the South. After a 3-point landing and during roll out with the power off I noticed debris coming from the South, at the same time the aircraft veered to the right at which time I corrected with left rudder to the stop. Again the aircraft veered to the right I applied left break with the aircraft on the asphalt but the aircraft continued to the right about 20 degrees. The aircraft left the asphalt into the soft soil and gravel into a drainage ditch with berm and flipped over on its back. I turned off the master and fuel selector and supported my body with my left arm and released the seat belts. After some effort I turned around and exited the aircraft after shutting off the ELT. Local time at 12:00 noon. Having been unhurt and with on phone I walked to the nearest home about 1/2 mile and found no one home, at which time I heard an approaching aircraft and walked back to airport. The aircraft flew over the airport and landed to see if help was needed and called the airport manager witch came out. I used his phone to call Dan Stewart to request help to move aircraft at the request of the manger that did not want the aircraft next to runway for night landings. At around 4:00pm the retrieve crew arrived with two trailers, we looked at the apparent damage to the front leading edge of both wing tips and front leading edge of the wings at the fuselage , broken front windshield, one blade of prop bent, right front landing gear attachment bent, and top of rudder bent. I located a local farmer with tractor with a lift on it that offered to help set the aircraft back on its wheels. We attached a strap to the tail wheel main spring and slowly picked up the tail of aircraft until it fell over on its wheels, at which time the aircraft bounced on its tail wheel and broke off the right landing gear folding it next to the right wing strut. The bottom of the rudder was bent at this time from coming in contact with the tail wheel. We drained the remaining fuel from both tanks about 15 gallons, removed both wings and placed on a trailer. At this time the manger stopped by, to see how we were doing and asks us to lock the gate when we leave. We used the lift to pick up the fuselage by attaching the sling to the prop blades and backed the trailer under the aircraft, placed blocks under the right landing gear attachment bracket. After strapping everything down we locked the gate and left fore the Wenatchee, WA at around 7:00pm. The fuselage is stored in a hanger at Wenathee, WA (KEAT) and the wings at Cashmere-Dryden airport (BS2) to be moved back to Wenatchee, WA.					

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

After veering off to right the second time, the application of power at the same time the left brake was used should of helped this situation.
