

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location
 Nearest City/Place: Intercourse State: PA
 ZIP: 17529 Country: Lancaster
 Latitude: _____ Longitude: _____
(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

Date: 04-12-2015 Local Time: 6:30
mm/dd/yyyy Time Zone: eastern

Collision with Other Aircraft: ☐ Midair ☐ On-ground ☐ None

AIRCRAFT INFORMATION

Registration Number: N3099F
 Manufacturer: Head Balloons, Inc.
 Model: AX8-105
 Serial Number: 317
 Year of Manufacture: 2002
 Amateur-Built: ☒ Yes ☐ No If Yes: ☐ Kit/Plans ☐ Make: _____
☐ Original Design

- ☐ IFR-Equipped and Certified
☐ Commercial Space Flight
☐ Unmanned Aircraft

Maximum Gross Weight: 1650 lbs
 Weight at Time of Accident/Incident: 580 lbs

Number of Seats: _____ Flight Crew Seats: _____
 Cabin Crew Seats: _____ Passenger Seats: _____

Number of Engines: _____

Category of Aircraft

- ☐ Airplane
☒ Balloon
☐ Blimp/Dirigible
☐ Glider
☐ Gyroplane
☐ Helicopter
☐ Powered Lift
☐ Rocket
☐ Ultralight
☐ Unknown

Type of Airworthiness Certificate

(Check all that apply)

Standard

- ☐ Normal
☐ Aerobatic
☒ Balloon
☐ Commuter
☐ Transport
☐ Utility

Special

- ☐ Restricted
☐ Limited
☐ Provisional
☐ Special Flight
☐ Experimental
☐ Special Light-Sport
☐ Experimental Light-Sport

- ☐ Certificate of Authorization or Waiver (COA)
☐ None ☐ Unknown

Landing Gear

(Check all that apply)

- ☐ Retractable

- ☐ Tricycle

- ☐ Amphibian

- ☐ Emergency Float

- ☐ Float

- ☐ Hull

- ☐ Other Launch/Recovery System

- ☒ None

- ☐ Tailwheel

- ☐ High Skid

- ☒ Skid

- ☐ Ski

- ☐ Ski/Wheel

- ☐ Unknown

Engine Type *(Select one)*

- ☐ Reciprocating ☐ Liquid Rocket
☐ Turbo Shaft ☐ Solid Rocket
☐ Turbo Prop ☐ Hybrid Rocket
☐ Turbo Jet ☒ None
☐ Turbo Fan ☐ Unknown
☐ Electric

Fuel System Type *(Reciprocating)*

- ☐ Carburetor ☐ Fuel-Injected

Engine	Engine Manufacturer	Engine Model/Series	Manufacturer's Serial Number	Date of Mfg. <i>mm/dd/yyyy</i>	Rated Power ☐ Horsepower or ☐ lbs of Thrust	Total Time (hours)	Time Since: Inspection (hours)	Overhaul (hours)

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

44 individual panels on the balloon made from a nylon stop rip material approx. 12 panels to be replaced in full 3 x 4 ft. remaining panels have some type of damage to the best of my knowledge can be repaired on the balloon by a certified balloon repair station. 384 panels not including the parachute (vent / deflation port) or the skirt that 44 panels which is 9.14% substained some type of damage. Some minor some not. No damage was done to the load tapes that are the scructual support for the panels. vent/deflation port has no damage, vent lines, ropes and steel cables have no damage. Building damage was entry door, 7 peices of alumium siding, 2 dozen shingles and a rain gutter.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

Around 4:30 p.m. est while observing the wind and weather conditions prior to that time, decided to make an attemp to fly a hot air balloon that evening. Gathered weather information visually from the weather channel, underground weather, weather bug, blastvalve and my radar for any unsettled weather saw no reasons with the weather conditions that were viewed that it would make it an unsafe or dangerous balloon flight. To the best of my recilection all weather sources were reporting light and variable, with wind speeds no higher than 5 mph and all weather sources were reporting to go to light and variable 1-2 mph around landing time around 7:30 p.m. I confered with my friend Todd Plank and also a partner balloon pilot that flies with New Horizon Balloon team, and we concluded together that it would be a safe and enjoyable evening to fly. We arrived at launch field around 5:30 to take the extra time to thoroughly do a visual preflight inspection on the aircraft being this was the first flight of 2015 that we would be flying paying passangers. Approx. 5:50 we were both satisfied that the air craft was in good condition. When we arrived at lauch site winds were approx. 3 mph from the WSW. So we layed the balloon out from that direction to do the inspection after the inspection was done we started to inflate the balloon the inflation time takes around 15 minutes, with an additional 5 minutes to set instruments, set top and heat up balloon to equal librium for take off. During the inflation we started getting wind against the side of the balloon from the south. During the time of inflation any small amount of wind makes the balloon like a huge sail and makes it impossible to stand the balloon up. Decide to stop inflation and deflate cold air in the balloon so we could move the balloon to a different direction. We moved the basket approx. 90 degrees from WSW to S. With the basket facing toward the North to allow the envelopes mouth to be open and facing into the wind derection. Proceeded to reinflate, stood the balloon up, went through our normal preflight check list. Balloon was swaying back and forth, still no fear that wind speeds had increased to any speeds even close to dangerous or unflyable wind speeds. We heated up the air temperature in the balloon to get to a few degees less than equal librium with just me in the basket. Called the passangers down to the balloon which all passangers were all ready briefed with all the does and dont's while in the balloon, showed the proper way to enter basket, had 3 girls enter the basket at 6:30, started to reheat the air in the envelope for the additional weight that was added to get back to equal librium. (a few degrees less than floating). The balloon was swaying back and forth I told the passangers that all of the movement would go away after we took off, I instructed the crew to put weight on the outside of the basket and turned to the othert pilot (which was not flying) to release the safety tie off line (not shown in the video). After the line was released pulled on the burner to increase heat to acheive lift off. Approx. 1 to 2 seconds after I started burning I felt a strong gust of wind hitting me in my back. (history reported a 13 mph gust at 6:32) The balloon started to lift off the ground. (this is where the balloon video starts) The balloon felt like it was gaining altitude at the correct speed the balloon didn't gain much altitude and started to come back towards the ground at that time realized that we were receiving false lift from the gust that had just accured. With the exceleration of the balloon heading toward the structure I decided to pull the deflation port to try to stop the forward movement of the balloon. (I was taught when in doubt rip out). which I have never had to do before. This was the first time. According to the manufacturer it takes 33 seconds for this balloon to deflate in 5 mph winds. The rest of what actually happened can be seen on the video that was shot at the time of incident. While basket was hanging along side of building while the balloon continued to deflate on the roof, I had around 12 seconds before the basket came to the ground. That was the first time I asked passangers if they were ok which was after the second impact. First was the door and the second was the building. They responded to be ok but scared ans shook up. Then balloon basket slid down the side of the building and landed on the ground I asked the again if the were ok and one of the girls thought her ring finger was broke and the other 2 said they were ok. We stayed in the basket until the balloon was safely off the building and gathered on the ground. At this point is where the video stops. I asked if anyone needed any kind of medics or ambulance and all 3 said no they were ok. Crew and I helped passangers out of the basket and helped them back to where the vehicle were parked. They stayed at the launch site for about an hour talking and we asked once again if any medical assistance was needed and once again they said no. All were ok. During that our i contacted the owner of the building and gave him a brief description of the damage of the building. By the time the 3 passangers left the girl that had stated the her finger may be broke said that she could move it and it was fine, the other girls now had lower back pain and the other had knee pain. They left approx. 8:00 p.m. came home did a followup call to make sure they got home ok and found out that all 3 had decided to go to the hospital to be checked out. To the best of my knowledge all 3 were released that evening with no further injuries.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

This incident could of been prevented with no obstructions within 360 degree at the launch location. And jokingly don't listen to the weather forecast.
