Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Damage and loss of right sponson and right rear fuselage in front of tail section.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

At approximately 12:30 pm on May 22nd I set up for a glassy landing near GHW. The flaps were down, gear up, fuel pump on, hydraulic pump on, mixture and prop set, water rudder up, descent was set at approximately 200 fpm, manifold pressure set at approximately 15". I felt it was the initiation of another smooth landing. Shortly after contact with the water surface the right sponson separated from the aircraft. I did not visibly see any obstructions in the water. I later discovered directly from this loss the right flap was significantly damaged. The right wing shortly after this contacted the water. I feel this was a direct response from losing a majority of the right flaplift and still having the left flap fully deployed. The aircraft then spun approximately 180 degrees counter clockwise and came to rest. I could see the sponson on the water surface about 150' away. Thinking back I wish I had time to retrieve the sponson for inspection. At the time it was not a high priority. I lowered the water rudder and headed the aircraft toward shore. The airplane could still be guided, but was impeded by the right wingtip touching the water. Not knowing at this point the right flap was substantially damaged, I raised the flaps thinking the right flap may still be in contact with the water. I didn't feel I had sufficient control to power the plane to a step position so I continued idling towards shore. Approximately four boats came to our position to see if they could assist us. Shortly after they arrived the wake from their boats reached the aircraft and started to put water into the aircraft. This occurred first through the passenger vent, then through the window frame. At this point I shut down the engine. I utilized my remaining time to protect my passenger and make sure he could safely exit the aircraft and board the waiting boat. Next I continued to work with the aircraft trying to pull it with a boat to shore. When failure to keep afloat was apparent, I secured a line with a float to the nose of the aircraft. I had one of the boats mark the GPS location and notify authorities there were no injuries. The aircraft sunk to a depth of 15'.

I still have no certain explanation for the sponson separating. I do not feel I let the wingtip drop significantly. A bird, a fish or other obstruction was not observed. No noticeable waves were observed at the time. The aircraft did not set down hard. There was no porpoise. I specifically felt it was another good solid executed landing.

I feel the only way the aircraft could have been kept from sinking was by not attending to the safety of my passenger and crawling out onto the left wing to keep the plane level.
