Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

While conducting aerial application operations my Helicopter experienced fuel starvation while ferrying back to the mix truck. Resulting in a Auto rotation into a wheat field. While in the auto the main rotor impacted the tail boom sheering off the tail rotor. A five mph tail wind pushed the ship resulting in a six foot long skid mark. The ship remained up right. As the main rotor blade spun down an out of Balance hop started because one main blade drag Bolt was sheered off allowing one blade to lead & lag. I was able to control the out of balance hop with control inputs, the main blades never impacted the ground. My 10 gallon fuel reserve was inadequate as well as my timing of my useable fuel. The wind had been out of the south all day, prompting the southern direction for the Auto, plus the Terrain was flatter and with the rows.

36 gallons of fuel was put on according to the bulk head sight gauge, my turn arounds were ten minutes. I was returning from the 4 load, had 45 minutes on my timer as I left the field, fuel burn 27 gallons hour. Had a 2 mile ferry, ended up half mile short.

There was ten gallons left showing on the bulk head sight gauge, supposedly five gallons is not usable. It is ten gallons!

I was under the impression the sight gauge depicted usable fuel. It does not. The actual Not Usable fuel is ten gallons in flight.

This make the safe remaining fuel twenty gallons, with a 15 min reserve. in flight!
