Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

The prop blade was broken about 14" from the hub. The engine and firewall were pushed back about 8" at the top and all of the mount tubes were bent or broken. The wooden structures forward of the aft wing support were broken. The forward spar of the left wing was broken near the lift strut attachment. The right wing was intact. The right landing gear failed in compression and its forward attachment was broken. The support for the forward fuel tank failed and the tank was pushed into the cockpit. The FBO building had damage to the rain down spout where the left wing struck and damage to a single brick where the prop hub struck

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

I Had attended a hamburger lunch at Sugar Valley airport and at approximately 1400 EST I prepared to depart for 8A7 (home base). I noticed that the wind had shifted to favor runway 20 and set the altimeter to field elevation. After a normal preflight inspection and engine start I taxied to the run up area at the end of 20. After tests I again noted the wind sock, it indicated a cross from my left and was shifting some in direction and velocity. My plane N2305J is very light with a take off weight of about 450 pounds (on this flight) so I try to very aware of wind conditions.

I announced by radio that I was departing Sugar Valley on runway 20, the local air boss approved, and I added power. As I picked up speed I moved the stick forward to pick up the tail and to left to trim for cross wind conditions.

Just as the aircraft was about to reach flying speed I passed the hangers which were blanking the left quartering wind and at that moment a gust of wind came and,sharply lifted the left wing and nose of the airplane blowing to the right of the narrow runway. I immediately reduced power in an attempt to abort the landing, I was blown so far off the runway, so quickly that it was no longer an option so I added power in an attempt to climb out and continue to turn back towards the runway by turning into the wind. I was unable to overcome the strong wind gust and the plane hit the house about 3 ft above the ground causing substantial damage to my wood and fabric aircraft and minor damage to the building.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

This was my first flight into Sugar Valley. If I had turned on to the runway at the taxi crossing rather than go to the end of RW 20. I would have been clear of the trees that are close in there and I would have had a better feel for the wind. The runway starts downhill bout there and that is where the wind caught me on take off.
My normal TO run is about 300 ft. so I would have had 2000 ft. to use.
