Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Front leading edge of outboard left section (approximately 3 ft) wing pushed in by impact with runway remaining sign. Impact damage to section of left flap. Impact damage to lower left vertical stabilizer leading edge. Section of left fuselage skin slightly wrinkled just forward of tailwheel strut. No prop strike or sudden engine stoppage.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Landing Accident at Snohomish County Paine Field, June 11, 2015 at approximately 14:50 LCL.

Beechcraft RC-45J N585PB

Pilot Statement: Michael Kopp

I was conducting a currency flight on an aircraft owned and operated by Historic Aircraft Foundation.

After two stop and go landings in right traffic for 16R the wind appeared to have shifted favoring 34L. I asked ATC for a wind check and my recollection is that the response was "wind 280 at 6 knots". I then asked if 34L was available after which ATC approved a landing on 34L. I maneuvered the aircraft onto final for 34L and noted that a left side slip was required to maintain centerline alignment due to the crosswind. Flaps on short final were set to 30 degrees. Frequent adjustments to heading were required to maintain runway centerline. Touchdown was in the touchdown zone and was made with the left wing slightly low and right rudder to maintain the centerline. Roll-out on the main wheels was normal with increasing left aileron and forward yoke pressure as the roll out on the mains progressed. Shortly prior to the tailwheel coming down on its own I initiated backward yoke movement to the rear stop while maintaining full left aileron. As the tailwheel lowered the aircraft began a significant swerve to the left. I applied full right rudder and right brake with no resulting arrest of the swerve. Left throttle was added and although it slowed the swerve the airplane direction remained significantly toward the left. I further increased throttle on the left engine at which point the direction of the airplane became more aligned with the runway direction. However, by this time the aircraft was either at the edge of the runway pavement or partially off on the left side and the left outboard wing struck what I later found out to be the 6000 ft runway remaining sign mounted in the area of the intersection of Kilo 6 and Runway 34L. As there had not been a prop strike, no fuel leak was evident, and I had full control of the primary flight controls including tailwheel steering rather than have a lengthy closure of Runway 34L on a busy day I asked ATC for taxi clearance to Historic Flight Foundation which was approved. Taxi to HFF was per normal procedure and on arrival the aircraft was shutdown and inspected. Significant damage to a section of the left outboard leading edge of the wing, left flap, and lower left vertical stabilizer was noted. I met with Paine Field Fire Department, Airport Operations Staff, and members of the NTSB who were at Paine Field investigating an earlier aircraft accident with a fatality.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I believe the cause of this accident was my failure to maintain directional control of the aircraft. Contributing to the accident may have been the shifting wind direction, and speed as the wind appeared variable from a quartering tailwind to a quartering headwind. I would recommend greater frequency of acting as PIC in each aircraft flown whether owned or Historic Flight Foundation aircraft to maintain high levels of proficiency.
