**Description of Damage to Aircraft and Other Property** *(Use additional sheet if necessary)*

Gear up landing resulted in bent prop blades and damage to belly skins. No damage to landing gear, gear doors or tail section

**NARRATIVE HISTORY OF FLIGHT** *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Because I had not flown since March 19, and having the opportunity June 13, I decided to do about a one hour flight Saturday afternoon. Weather was excellent with clear sky and light winds. After some aircraft detailing, thorough preflight and protracted runup, I departed KBZN to the west climbing to 10,500' with the objective of getting comfortable with the aircraft's handling, systems and procedures. Upon returning to KBZN approximately one hour later, I decided I should get a few landings in while there and after obtaining the ATIS information "Lima", I called tower fifteen miles southwest of the airport and requested two touch and goes and a full stop landing. Tower instructed me to report a three mile right base leg for runway 12. The approach was normal with light turbulence and upon completing my "GUMP" checklist, I reported the three mile base leg and was cleared for a touch and go landing and instructed to fly left traffic for my touch and goes and report midfield downwind for clearance for my next touch and go. My first landing was smooth and uneventful as was my subsequent takeoff. I retracted the gear once I had 85 KIAS, positive rate of climb and safe altitude with the intention of lowering the gear on downwind once established at pattern altitude. As I leveled off on the downwind leg and reduced power, an aircraft called tower requesting runway 11. Since I was flying over runway 11 on downwind, I became preoccupied listening to the radio transmission to understand where the aircraft was and started to worry that I would pass my midfield reporting point before I could transmit my position. As soon as the frequency cleared, I reported my position and was cleared for a touch and go on runway 12. I used 10 degrees of flaps on downwind, 20 degrees on base leg, and full flaps turning final. Prop and mixture were full forward. Gear was up and I never heard a gear horn. I attribute this to wearing a noise canceling headset and possibly the horn was delayed because my approach with full flaps is usually about 15" of MP which is the bottom of the green. By the time I realized my sight picture was too low on flair, it was too late as a second later I could hear the prop very lightly striking the pavement. The time was approximately a little after 1500 local.

**RECOMMENDATION (How could this accident/incident have been prevented?)**

Operator/Owner Safety Recommendation

Upon reflection, I think there were at least three contributing factors leading up to this accident.

1. I had been ill with food poisoning six days prior to the accident. Since that many days had passed and 4 days since I had taken any medication, my assessment was that I was fit for flight. While completely subjective, in retrospect, I can't help but wonder if I was not as alert as I thought I was prior to flight.

2. I had not pre-planned to do touch and goes but rather made a last minute decision upon returning to the airport and because it is something I rarely do, did not adequately focus on the fast changing configurations required for a takeoff, downwind, approach and landing for a complex aircraft following an uneventful landing.

3. I allowed myself to become distracted by another aircraft on frequency while on downwind and overly concerned about his location and my position report when I should have been going through my "GUMP" checklist.

I would like to see gear horns wired into the audio system on light aircraft so they can be heard in the pilot's headphones rather than depend on electromechanical horns mounted on the glare shield. A synthesized voice announcing "WARNING, GEAR UP" or "CHECK GEAR DOWN" would be even better than a horn. With today's electronics, this would seem to be relatively simple. My AOA system uses this type of alerts.
