Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Nose wheel is broken, propeller is bended, the lower nose is scratched heavily.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

At 10:20 local time 06/28/2015, I, Nhan Hoai Trinh, took off the airplane C 150/U N19337 from KOLV direct to KMDQ, it is my building time flight in my training program at AirVenture Flight Center.

At around 11:50, the wind information I received from the KMDQ unicom frequency (123.0) is 340 degree direction with 05 knots velocity. I followed the procedure right traffic pattern runway 36 and on the final runway 36, prepared landing on runway 36. I completed the self announcement broadcasts step by step. From the right downwind, right base and final.

On short final, I broadcasted one more time and observed a single engine plane was holding short at holding position marking to wait for my landing. I reduced proper speed around 60 knots, extended flaps 40 degrees, prepare for rolling out.

Suddenly, I saw a twin engine airplane was heading on me. He/she was on short final runway 18 with a higher altitude than me. The distance was closing fast.

I observed him/her, had confusion to give my decision at this very short time, go around or not. My airplane immediately touched down the runway, bounced several times. I tried to control it but it is impossible, my airplane crashed on the runway.

At this time, the twin engine plane carried out going around and left the airport.

I immediately turned off the ignition, master, fuel valve, opened seat belt, doors and evacuated the airplane.

I was not injured. My airplane had damages, the nose wheel is broken, the propellers are bended, the nose is scratched heavily. I did not verify the affected engine system yet.

Soon after, the KMDQ staffs and manager came, took pictures and finally move the airplane to the ramp for runway in use.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

As a pilot in command, go around is always the good solution in this case. The pilot need to be very careful because the plane in danger is in a very low altitude when compare to the the opposing airplane, with the approach speed, the power off stall can be occurred easily. The second choice is to do short field landing and broadcast to the opposing airplane, require it to go around.

However, there is no doubt that pilot in the crashed plane were in a tough situation and it is hard to give a best choice in a very short time.

The lesson after this accident is try to be always alert and ready for go around when entering the short final.
