Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Aircraft presumed to have struck ground first with right elevator twisting fuselage aft of rear window. Pilot's door hinge pins sheared providing escape route for all three persons. Copilot door jammed shut. Both door windows opened on impact. As did the baggage door. Windshield popped out of fairing on bottom edge or when sling lifted from the canal and placed on truck. Right elevator bent inboard of endpoint. Nose gear doors damaged. One propeller blade twisted and bent. Retaining ring popped out. No damage to ailerons, flaps, or left elevator. Aircraft rested on wings on banks of canal.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Pilot, CFI and owner (me) boarded aircraft at 11am after walk around preflight. Pilot took left front seat, CFI right front seat and owner the right rear seat. After a short cockpit brief, the engine was started. Pilot acquired ATIS. He then contacted ground for taxi instructions. Pilot proceeded to runway run up area for 32 right. CFI entered o88 as the destination in the GPS. Advised the pilot to request right crosswind departure. Upon release departure was normal. While enroute CFI asked pilot to ask ATC for flight following and advise o88 as destination. Also that we would be doing air-work on the way. Pilot proceeded to follow CFI's instructions to level at 2500 then slow to flap speed. The pilot complied. After slowing for slow flight he asked for a departure stall. With flaps still at 40 and gear down he requested a 60 degree bank & a left 360 which was accomplished satisfactorily. CFI then asked pilot to proceed to o88 and get the AWOS. CFI dialed the radio, pilot noted wind and direction. After a small turn or two left and right to get situational awareness relative to the airport he proceeded direct to the airport crossing overhead at 1600 feet. After passing the airport the CFI asked for a left turn to enter the pattern for 15. I reminded them it was right traffic for 33 so the pilot turned further left to gain space for the base turn. In the base turn the pilot commented that he couldn't see the runway. He is used to flying a Piper Arrow (low wing aircraft). The CFI commented "you're doing fine just keep turning." Just before wings level I saw the runway. We seemed a bit high to me. The altimeter had been at 650 feet the last time I looked at it. I made the comment, "It's up to you guys, I can't see the runway." As I recall, I didn't hear a check of throttle, rpm, mixture. (After the airplane had been moved to the hangar at the airport the prop control was still at 2200 RPM). We landed right main first with a slightly low wing on the right. We bounced but not real hard. (The pilot told me on the way home that he was trying to go around but instead porpoised and went off the left side of the runway, touching down again. He felt he wasn't getting full power). I began to yell power, power, power. In a matter of a few seconds we hit the ground one or two more times and wound up in a canal near and left of the runway as if it was a water landing. When he made the decision to try to go around he raised the gear, then the flaps all at once which gave a sinking feeling.

The next thing I knew we were getting drenched. Both pilots windows had opened on impact, the pilots door had come off the hinges (sheared the hinge pins) and the CFI's door was jammed. I tried to help him open it but discovered quickly that it wasn't going to open. The pilot got out and pulled the CFI across the pilot's seat into the water and helped him to the bank. My glasses came off at impact and landed in the copilot's seat back pocket. I grabbed them and put them back on while the cabin was filling with water through the pilot's door.

After the CFI was out I managed to get out without moving the seat forward. Amazing. While the pilot was helping the CFI onto the bank I started gathering up floating items and placing them on the fuselage by the ELT antenna which by the way did not go off due to the gentle deceleration. We slid about 40 feet after touchdown (based on the bent vegetation behind the wing). I saved 6 headsets, four of mine, two of theirs. Also my plastic cooler which was floating and one bottle of water from the baggage compartment. I wasn't able to find my cell phone or anyone's glasses. I then felt around the instrument panel trying to find the master switch to shut off the gear warning horn. I found the ignition keys but not the master switch. Needless to say I was a bit shaken up. I climbed the slippery bank with the help of the pilot. I then helped the CFI to move further from the bank. The pilot then handed me the items on top of the airplane after I had gotten out of the water. The airplane was being supported by the wings on the banks of the canal. There was about a foot or more of silt on the bottom of the canal which felt like quicksand. The cabin filled with water to about the bottom of the rear side windows. I had brought a cooler with five 16oz bottles of water and some cookies in a waterproof container anticipating the heat. That was a good move as I nearly had a heat stroke while waiting for the rigging crane and truck to arrive to recover the airplane from the canal. By then it was close to 100 deg F. The pilot and CFI lost their glasses and we all lost our cell phones. I found my iPad in the airplane after the airplane was moved into a hangar for overnight storage.

The iPad mini was wasted, water logged. The recovery crew did an excellent job recovering the airplane to an empty hangar. On Thursday morning at 5 a.m. a crew from Plane Parts arrived to dis-assemble the aircraft and move it to Pleasant Grove, CA. Someone took all the books etc. that we had collected from the airplane and left in the hangar without my permission. There was a flight log in a ziploc bag which would be useful now. I'm not a happy camper.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Possibly spending more time with cockpit familiarization. To me he seemed rushed due to unfamiliarity.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No
(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

The airplane was tuned to near perfection. My big loss.
