Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Left wing separated upon impact with trees and right wing suffered serious damage and was leaking fuel. The engine cowling broke open engine was running during impact so a prop strike was very likely. There were a few trees trimmed as well.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

At 5:35am on July 1, 2015, I departed Rexburg airport. I had filed a round robin flight plan from Rexburg, to Twin Falls, to Challis, and back to Rexburg. At a little past 7:00am, I arrived at Twin Falls and landed to get my log book signed. From there, I was scheduled and felt confident with my navigation. I left at about 7:30 from Twin Falls towards Challis. My plan was to fly a true course of 17.0o to HWY 93 at an elevation of 11,500ft., then turn towards Challis, Idaho following the highway at a true course of 330.0o. When I was about 7 or 8 nautical miles to the southwest of Copper Basin, I was unsure if I was on course or not. It was difficult to tell over which mountains I was heading. The area was beautiful and there was a lot of space below. I figured that I could go down, use the basin as a navigation aid, looking for features that would indicate where I was, and then climb back out and fix my course from there. While descending I was as far from the mountain as I could be and cautious of the environment. I didn't know that I lacked any sort of training or understanding for flying in mountainous regions and did not see it as a dangerous decision. When I discovered that I was indeed in Copper Basin, I chose to go back up to where I was before I had descended. I was headed due east at the time, after going down and turning right through the basin. I started to climb and turned south through what I thought was an open route through a canyon back to where I had first descended. As soon as I turned, I realized that it was much steeper than I thought, and that I should reroute. It was unclear what I should do, I felt I had no room to turn around. The plane wouldn't climb very fast, hardly at all. I was at maybe 8,500-9,000ft. elevation, several hundred feet above the trees. The temperature was about +15 oC. I wasn't sure what to do except put the plane in the max climb rate. It still would not go up in altitude at all. I did not feel I had enough time to make a radio call but that I should fly the plane and try to climb out hoping that maybe it would clear up near the top around the side where I couldn't see. Soon, I realized I had to put the plane down. I performed emergency landing procedure and configured the plane for landing. I put the plane in a higher pitch to slow my air speed down as much as possible without stalling. I aimed for an open patch. I couldn't make it there and had to go to the trees. Right before I hit the trees, I tried to graze the tops of them to slow myself down more. When the plane stopped, I was facing the ground and hanging by my seat belt. I did not realize the extent of the damage, but I saw the right wing was rapidly leaking fuel out of the front. The engine had been ripped from the cowling and I was afraid of a fire. I turned off everything I could think of that might cause a fire, left the key in the ignition, and dug for my phone, log book, and student textbook. The crash left me with no injuries. I then made a trip down the mountain to seek help.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

As the flight instructor who suggested and endorsed this cross country I have learned a great deal. First I should have suggested a different route that would have avoided mountainous terrain all together for a solo cross country. Second I should have given Nathanael some actual mountain flying training prior to a solo flight over mountainous terrain even though I beleived there was plenty of altitude at 11,500' that he flight planned for that section of the flight. How to cross ridges, maintain a safe altitude and to never fly up a canyon would have been very helpful in avoiding this accident.
