Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Nose wheel and right main separated from aircraft. Left and right wingtips substantially damaged. Right and left wing roots buckled where attached to airframe. Tail structure broken where it joins cabin. Engine structure broken where it meets cabin. Instrument panel separated from mounting. Many loose instruments within panel.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Aircraft departed Renton RWY34 and performed a right pattern to perform a banner pickup. Aircraft approached banner pickup gates at 55 mph. Upon aircraft passing through gates pilot applied full power and pitched up per standard banner pickup procedure. Upon reaching 40 mph pilot pitched forward to maintain airspeed and simultaneously looked back to ascertain successful banner pickup. Upon returning gaze to airspeed indicator airspeed had decayed below smallest marking in airspeed indicator. At that time the banner began "pulling" which caused a substantial increase in drag and aircraft pitch-up which led to a loss of airspeed and increased angle of attack. This led to an immediate stall of the aircraft. The pilot pitched down and fumbled for a second to find the banner release lever. Lever was pulled and banner released from the aircraft. Pilot attempted to maintain wings-level using rudder and pitch the aircraft nose down to break the stall. Pilot realized that not enough altitude was remaining for a successful stall recovery and so pitched up to attempt to hit the ground in a flat attitude instead of a nose-down attitude and was partially successful. The left wing impacted followed by the bottom of the fuselage. The aircraft bounced slightly and rotated 180 degrees counterclockwise before coming to rest on an airport service road.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

The crucial error that this pilot made (in the opinion of the pilot) was to look back to see if he has caught the banner. This momentary inattention allowed the airspeed to decay enough for a stall to occur when the banner drag was introduced. Emphasize to new banner tow pilots the importance of focusing 100% on airspeed and not worrying about whether or not the banner was picked up as that momentary distraction may cause a stall. The increase in drag due to the banner is substantial and there is no altitude to recover from an error.
