Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Bent propeller and sudden engine stoppage. Crushed engine cowling. Damaged exhaust pipes and mufflers. Both wings heavily damaged with dents and/or creased. Crushed tips of vertical tail and rudder. Bending creases/skin tears along bottom of tail cone. Broken windshield. Right wing displaced slightly in the lag (aft) direction. Skin distortions over right side of rear spar carry-through. Skin creases below right door. Right door will not close properly. cabin top skin punctured by VOR antenna mast. Destroyed COMM and VOR antennas.

No damage to property.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Pilot departed home field (KHFD) at 0930 EDT for Goodspeed Airport for landing practice. Goodspeed has been used by the pilot routinely for this purpose. Upon arrival, pilot noted flocks of geese on both sides of the runway (32). Presence of geese on the airfield is a common occurrence and is generally not an issue for airport flight operations. Pilot made first approach to a full stop landing and observed geese to remain on ground without signs of taking to flight. Pilot then elected to back taxi for take-off. Again, no adverse response from geese. Pilot took off and remained in the pattern for another 4 full stop landings along with back taxis for take-off. Geese remained quiet and on ground. On short final for the next landing, both flocks of geese took to flight, crossing the runway directly in front of the aircraft. No immediate evasion action was necessary; however, executing a go-around was judged to not be an option. With landing committed, pilot adjusted flight path just before round out to ensure going below the geese. With a wheel landing selected, the touchdown initially felt and appeared to be acceptable. A swerve/skid to the left quickly developed which pilot was able to get mostly under control but headed 20-30 degrees to the left of runway heading. With open grass ahead, pilot elected to continue in that direction and noted a runway light (~18-20" tall) also directly ahead of left main gear and tried to alter path to the right with brake/rudder. Pilot over-applied brake and nosed over. After aircraft ceased all movement, pilot secured fuel and electrical power, released lap belt/shoulder harness and exited through left door. Pilot was not injured.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

When the aircraft ceased movement, pilot was left "hanging in the straps" with no injuries. Had a shoulder harness not been installed in the aircraft or not used, that mostly likely would not have been the case. Although this mishap occurred at relatively low energy, flipping over generates sufficient force to launch the occupants into the cockpit/cabin roof when not well restrained and can result in serious if not fatal head/neck injuries. This issue is especially important for legacy aircraft that usually had only lap belts when purchased. Flying an aircraft without a 3 or 4 point restraint system is not a prudent course of action.

Airports that have the possibility or, certainly, a known high probability of having wildlife on or close to the runway need to take steps to mitigate that risk...be it with decoys, noise generators, etc. It is easy to become complacent regarding flocks of geese on an airfield especially if, in most circumstances, they appear to remain tolerant if not oblivious to airplanes coming and going next to them. However, if that wildlife happens to intrude upon the runway while a landing or takeoff is taking place, pilots may divert critical attention away from the task at hand when total attention is required.
