

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

Nearest City/Place: Whittier State: CA

ZIP: 90601 Country: USA

Latitude: 34 0.33N Longitude: 118 3.06W

(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

Date: 08/16/2015 Local Time: 1711

mm/dd/yyyy

Time Zone: PST

Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

Registration Number: N412LA

Manufacturer: Bell

Model: 412

Serial Number: 33061

Year of Manufacture: 1981

Amateur-Built: ☐ Yes ☒ No If Yes: ☐ Kit/Plans ☐ Original Design Make: _____

☐ IFR-Equipped and Certified

☐ Commercial Space Flight

☐ Unmanned Aircraft

Maximum Gross Weight: 11,900.0 lbs

Weight at Time of Accident/Incident: 7892.3 lbs

Number of Seats: 8 Flight Crew Seats: 2

Cabin Crew Seats: _____ Passenger Seats: 6

Number of Engines: 1 (Twin Pac)

Category of Aircraft

- ☐ Airplane
- ☐ Balloon
- ☐ Blimp/Dirigible
- ☐ Glider
- ☐ Gyroplane
- ☒ Helicopter
- ☐ Powered Lift
- ☐ Rocket
- ☐ Ultralight
- ☐ Unknown

☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Aircraft Explosion

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Explosion at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Aircraft tailboom severed behind sync-elevator, four main rotor blades damaged, and skid gear compromised. Vertical impact damage event throughout drivetrain main-transmission area and upper flight controls.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Conducted a preflight of COPTER 10 (N412LA) as the assigned aircraft for HLCO (Helicopter Coordinator) mission for the day 08/16/2015 at 08:50 am PST. Aircraft preflight was conducted IAW RFM checklist. Aircraft was noted to have a maximum fuel indications as indicated on the fuel gauge. No discrepancies were noted during preflight.

Aircraft was dispatched for a 1st alarm brush response to the Montebello area. We were dispatched at approximately 2:40 pm PST and departed KWHP around 2:48 pm.

While providing Helicopter coordinator services for a wildland brush fire in the city of Montebello, I was functioning as PIC for LA County Fire Department Bell 412 helicopter under public use operations. We were dispatched to a fire with about a 12 minute flight from KWHP (Whiteman) Airport. I departed with the full tank of fuel, and was accompanied by 2 additional crew members for essential crew functions for the mission function tasks.

Once we were established on scene, I was responsible to coordinate the fire traffic area and manage 10 on scene aircraft to engage in firefighting and ENG operations. The fire complexity was elevated, which increased the overall crew's workload. At a mid-point during the fire fighting operations, the fixed wing aircraft stated they had a station time of 40 minutes remaining. It was then that I referenced my fuel state and verified that I could match that timeline before we went in for fuel as well.

The fire became more problematic as there was heavy spotting beyond the planned containment areas. The resultant challenges with the ground personnel on the fire kept the airplanes longer on station, and I failed to re-adjust my station time appropriately for my aircraft. The airplanes stayed for at least 2 more drops that I recall, which based on their turn times resulted to roughly an extra 15 - 18 minutes extra station time. When they were bingo on fuel I released the airplanes to go refuel and dispatch to another fire, I rolled out of our orbit altitude and headed for or heli-spot which was only just over a minutes flight time away.

As I cross checked my instruments I noted 2 FUEL LOW segments lights illuminated on the Master Caution panel, as well as the Master Caution light. I also checked the fuel gauge and it reading just slightly above zero. I opened the fuel Inter-connect switch soon after as prescribed by the RFM. Very soon after that the fuel BOOST segment light illuminated on the caution panel, and the No.1 ENG flamed out. I lowered the collective slightly and I increased the RPM switch on the No. 2 engine to maximum, At that point I elected to land as soon as possible and turned back towards a road system that paralleled the 605 freeway for a single engine landing. As I increased the collective, the No. 2 engine did not respond appropriately. The Low Rotor RPM audio and low-rotor light activated. The RPM continued to droop as I increased collective and I elected to reduce the collective to enter auto-rotation. I selected the best possible forced landing site within glide distance for the state of the aircraft, which was in the cemetery we were flying over at that time.

The rotor RPM stayed on the lower side and the landing area presented with a down slope condition. I realized that I would have to perform a zero ground run autorotation to prevent excessive ground run down the hill. I executed a higher than normal nose high deceleration hoping to recover some of the rotor RPM, I pulled initial collective to slow rate of decent. The tail skid contacted the ground, and sprung the aircraft forward. I pulled the remaining collective to cushion the landing but rotor RPM was low. Upon impact with the ground, the rotor blades flexed down and severed the tailboom just aft of the elevator. The aircraft sustained damage as a result of a relatively high vertical impact component in the landing.

I completed an emergency shutdown and all occupants exited the aircraft. The rear passenger complained of some lower back pain and was taken to the hospital for a checkout and released soon afterwards. The FAA and NTSB were notified and the aircraft was recovered and returned to our base of operations.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Actions and processes are identified in follow up letter to NTSB Air Safety Investigator Michael Hicks

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

**Total Time/Cycles
On Part**

_____ Hours

_____ Cycles

**Time Since This Part
Inspected/Overhauled**

_____ Hours
