Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

Main Rotor / Tail Rotor destroyed. Tail boom severed and scattered in pieces.
Skids separated, fuselage damaged.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

- I had controls as we exited 21R on B5. I switched Freqs to ground and contacted ground, requesting taxi to Universal. I was cleared C, C4 hold short 21L. I proceeded and hold short as instructed. Ground cleared me to cross 21L and as I began to proceed my instructor took control of the ship. She accelerated across 21L and ascended to approx. 15'. We saw incoming traffic and to maintain separation, my instructor veered right for D. At this time ground called and instructed us to "hold D4 proceed behind company traffic." My instructor slowed the aircraft and began a left turn to intercept D4. Upon turn completion, low rotor warning light and horn initiated. At this time I yelled "low rotor" and made sure I was clear of controls. My instructor recovered as best as possible however the aircraft did not have enough power to remain airborne. The aircraft struck the ground skids level which knocked my headset/hat off, it bounced up approx. 4' to 6' and struck again skids level, then it rolled left onto its side. I checked my instructors condition, asked her to operate fuel shut off, turned all switches off and removed key. I exited aircraft and helped my instructor out. We walked clear of the debris to wait for emergency services.

I believe that if the aircraft had not been turned into the tailwind, the "low rotor phenomenon" would have been avoided.
