Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

AIRCRAFT SUSTAINED A BENT RIGHT WING AND RIGHT SIDE GEAR LEG DAMAGE, *minor prop strike*

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The aircraft controls were handed over to the pilot sitting in the back seat at the beginning of the runway prior to departure. Visibility was noted by the pilot in the back seat that he could not see the gauges nor heading given the passenger in the front and the angle the plane was sitting at on 31" Bushwheels. **Noted: The pilot in the back has over 5000 hours of time in tailwheel aircraft and around 700 hours in type but not from the back seat. The pilot started the ground roll to take off and veered toward the left side of the runway claiming to the pilot in front that it felt weird not being able to see the gauges. The pilot in back asked for the speeds from the pilot in front during the roll. At that same time the airplane ran onto the left side of the runway and the plane spun on the ground 180 degrees (ground looped). The plane stopped without any sort of prop or engine strike. The left wing did hit the ground and was bent significantly as was the gear axle for the right side tire.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I should have sat in the front seat to fly for visability in this type aircraft on the large bushwheels.
