Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

No damage to other property.

Aircraft received damage to the propeller, engine mount and cowling, right wing outboard of strut, right landing gear, and right horizontal stabilizer and elevator.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The flight departed Phoenix-Goodyear (KGYR) at approximately 0900 local time with 36 gallons of fuel and an intended final destination of Double Eagle (KAEG). A fuel stop was planned for Show Low (KSOW), with alternates of Taylor (KTYL) and St. John (KSJN). Flight following was obtained, and cruising altitude was 9,500 feet MSL. The flight time was approximately 1 hour 40 minutes. Gary Beck was Pilot in Command.

Enroute weather consisted of scattered clouds and occasional light turbulence. Approximately halfway to Show Low, ATC advised radar contact was lost due to terrain, crew continued monitoring ATC until reaching Show Low. Pilot Beck chose to land at Show Low instead of the alternates.

Approaching the Show Low area, crew obtained the automated weather broadcast for the Show Low airport. Pilot Beck noted that the wind direction was variable, and chose to enter right traffic for runway 24 at 7400' MSL and 87 KIAS. Crew intermittently monitored the weather broadcast while in the traffic pattern.

Abeam the intended touchdown point, Pilot Beck reduced power and added approximately 15 degrees of wing flaps to maintain 80 KIAS in the descent through the base leg. Power was reduced to idle and wing flaps increased to approximately 30 degrees on the turn to final at 6900' MSL. Pilot Beck maintained 70 KIAS on final to compensate for gusting winds, 5 knots above the normal approach speed. Reaching the runway threshold, Pilot Beck noted a windssock at the left side of the runway threshold was indicating a northerly wind of 8-10 knots. The roundout and flare were conducted using standard crosswind technique, with a right slip into the wind, maintaining runway heading with rudder. Inches above the runway in the three-point attitude, and approaching stall speed, a windshear shifted the nose of the aircraft approximately 25 degrees left of the runway centerline.

Sensing a quartering tailwind, Pilot Beck applied corrective inputs with aileron, rudder, throttle, and wheel brakes. All three wheels were now on the ground, continued control inputs had no effect on the course of the aircraft. The aircraft left the runway on the left side in a skidding left turn. Pilot Beck brought the engine mixture control to idle cut-off to stop the engine as the skidding left turn continued. After turning approximately 90 degrees from runway heading, the right landing gear broke causing the right wing and propeller to impact the ground. The aircraft pivoted to the right about the wingtip and came to a stop. Pilot Beck turned off the ignition and all electronics, and Pilot Samuelian turned off the fuel valve. Both pilots were able to exit the aircraft through the door and move to safety.

ADDITIONAL INFORMATION (Please type or print in ink)

Use this space if additional space is needed for any answers.

The winds observed on the windsock by the pilot (northerly, 8-10 knots, gusting), were very different from the winds reported by the automated weather broadcast.
