Description of Damage to Aircraft and Other Property <i>(Use additional sheet if necessary)</i> Outer portion of right wing (beyond struts), right stabilizer and elevator, tail section (approximately 5') of fuselage bent and tailwheel bent to left. Possible damage to fuselage at connection point of right main gear.					
NARRATIVE HISTORY OF FLIGHT <i>(Please type or print in ink)</i>					
Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.					
We departed KGHG at approximately 3 PM for pleasure flight with my son Nicholas. Prior to departure I checked the local weather via the local AWOS (120.0) and ForeFlight; winds were out of the southwest at 7, skies were clear. During the preflight, I noticed that the main gear tire pressures were low and added approximately 8 lbs to each tire.					
After about a 1 hour flight, we headed back towards KGHG for landing. Checking the AWOS, winds were reported 115 at 7, a direct cross wind, little change since departure. Monitoring the CTAF/UNICOM 122.8, a Piper Cherokee reported downwind 06: we entered the traffic pattern on a 45 for the downwind 06, following the Cherokee.					
I extended the downwind more than usual, following the Cherokee. On base leg I added one notch of flaps. I found myself high on final and slipped to loose altitude. I set up for a wheel landing, all seemed normal. Upon touch down I took a hard bounce and then another. I then adjusted for a 3-point landing. Upon landing the plane started to fish-tail and began pulling to the left. Unable to correct we went onto the grass median, slowing but still pulling to the left. Continuing to turn left, the right wing dipped and hit the ground. The plane came to an abrupt stop on it's gear with no prop strike. I shut down the engine, turned off the master and turned the fuel selector valve to off. We exited the plane normally, without any injury.					

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Reflecting on the accident, I believe a few factors are worth keeping in mind:

1. I was high on final and need to lose altitude quickly. Slipping the aircraft was effective but I picked up some air speed. I had plenty of runway, so elected not to go around, however I touched down fast and bounced. In hindsight, if the 1 approach is a bit off, it would be wise to go around and re-set.
2. Upon exiting the aircraft, I noticed that the wind sock had shifted slightly, favoring 24. I believe that I actually had a slight tailwind component, adding to the speed.
3. Be aware of the impact a change tire pressure may have on touch down.
