NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Departed KJNL in VFR conditions at approximately 14:30 local time en route to KVBT, VFR. Obtained VFR flight following to Bentonville. Obtained automated weather from KVBT and reported airport in sight. ATC reported no traffic observed and authorized frequency change. Initiated 2 mile left base for runway 18, reduced RPM to 1500 and turned alternate air on, slowed airplane to 80mph indicated and added 30 degrees flaps. Announced turning final on CTAF 122.8 and turned final. Turned off alternate air and rounded out at 75 mph. Airplane had slightly high descent rate and bounced on touch down. Initiated a go around. Retracted flaps and performed normal left traffic pattern, making appropriate radio calls. Abeam the numbers on left down wind, reduced throttle to 1500 rpm and turned on alternate air. Upon slowing to 80 mph, turned left base for runway 18 and added 30 degrees flaps. Turned final, turned off alternate air on short final, rounded out at 75mph with a slightly high descent rate causing the airplane to bounce 1 to 2 feet on touch down. Initiated a go-around. Upon initiating the go-around the airplane rapidly yawed left approximately 45 degrees. Initiated corrective action with ailerons and rudder. Heard the stall warning horn and immediately lowered the nose. Stall warning stopped.

Airplane settled with power and touched down with both main wheels on the runway in level pitch and roll attitude at approximately a 25 degree angle to the runway centerline. Upon touch down the right main landing gear separated from the airplane causing the right wing and propeller to impact the runway. The airplane came to rest with the main portion of the fuselage and right wing on the runway and the tail wheel in the grass along side the runway. I immediately moved the throttle and mixture levers aft to idle and idle cut-off and turned off all switches. I do not remember turning off the magnetos. As I was exiting the airplane through the cabin door several gentlemen present at the airport ran to my aid. They quickly turned the fuel valve to the off position. They thought something else was left on because they heard the turn coordinator winding down and so continued to look at switches in the airplane, I do not know if they changed the position of any of the switches. The line service manager for the Summit Aviation (name unknown) notified ATC that the runway was closed. I spoke to the North Texas FSDO and then to Nick Cusimano of the Little Rock FSDO who authorized movement of the airplane from the runway and initiated the investigation. With the help of the line service manager and a few other gentlemen we moved the airplane into the grass a safe distance from the runway and removed the RH MLG from the runway where it remained about 30 feet north of the aircraft.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I believe that timely application of right rudder while maintaining a wings level attitude and level pitch attitude may have prevented the excessive side load and separation of the right main landing gear from the airplane.
