Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Accident damage: propeller, spinner, upper engine cowling, fuselage, vertical stabilizer, rudder, wheel pants

Aircraft recovery damage: engine cowling lower, fuselage, horizontal stabilizer, elevator, wing tips

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Aircraft was flown to a VFR straight in wheel type landing to runway 11 at KCOI. Touchdown was 500 to 800 feet down the runway on speed of 70 mph and on center line. Aircraft roll out was accomplished on main wheels only, on center line, for approximately 800-1000 feet. Tail wheel was lowered to runway at approximately 45 mph IAS. Upon tail wheel touchdown, aircraft uncharacteristically and substantially yawed left. Full right rudder was applied with minimal effect, at which time right brake was applied increasingly to prevent aircraft from leaving the paved runway. Runway exit at this time would have resulted in a ground loop in a water filled drainage ditch and possible contact with a concrete and steel drainage path under taxiway "B". Application of heavy right brake and possible dragging left brake resulted in an over braked condition with aircraft nose down, propeller contact, spinner contact and aircraft flip-over. At no time did the aircraft leave the confines of the paved runway. Aircraft came to a complete stop immediately upon contact of the vertical stabilizer and rudder with the paved runway short of intersection B4.

Pilot and passenger exited aircraft from main entry door.

Post accident inspection, prior to aircraft recovery, revealed the tail wheel assembly commanding a left turn with the rudder centered. Full inspection of the tail wheel was not possible because of heavy damage to the tail wheel and attached bulkhead caused during recovery of the aircraft.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

none known

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

The operator/owner suspects that the aircraft experienced a mechanical malfunction of the tail wheel assembly resulting in an uncommanded left turn upon tail wheel touchdown and/or a dragging left main brake that pulled the aircraft into the uncommanded left turn after tail wheel touchdown. The operator/owner had logged 729 successful landings during the past 4 years in this tail number aircraft prior to accident with no issues.
