NARRATIVE HISTORY OF FLIGHT <i>(Please type or print in ink)</i>		
Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible. Pilot statement The winds were variable in direction from the N to ENE about 10. This places both the runway 15-33 and the taxiway roughly having a direct crosswind. No traffic was in the area visually or on the radio. I had executed 2 normal touch and goes using rwy 15 also had done two touch and goes to the taxiway approximately 310 /130 heading. After the last T&G I practiced a simulated engine out back to the rwy 15 successfully. I then attempted to do another back to the taxiway 31 I was about 100' lower at initiation from the previous one . The turn to down wind caused the speed to decay so I lowered the nose to attempt to regain the speed. The runways were closer together so the bank angle needed to also be greater also causing a slowdown. I realized that I had a very nose down attitude and applied full power but was only able to correct to about 5 degrees nose down with a good bit of vertical speed still in the airplane. I believe I had "normal" full power. We have another breezy that has a nose cowl and a 140 hp O-290. This breezy does not have a nose cowl or other visual reference for the pilot. it has 110 hp O-235. I feel that the higher horsepower unit would have completed the recovery without incident. I misjudged the amount of down attitude I had in this airplane and applied full power too late to recover with the lower power available. There may have been stronger winds during this approach but was not able to get them from the awos-3pt located on the field.
