Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Light damage to the right wing tip with some oil canning to wing. Right landing gear bent and right bend in tubular frame where it was attached.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

When we were about 10 miles out we heard another plane using 22 to take off, at 3 miles out the Mayo Helicopter left in the direction of 22; at that time I listened to the AWOS recording and it said 170°. Upon entering left downwind for 22 the wind sock appeared to be more in line with 22 than 15 so we chose to continue on the down wind for 22. On short final we were approximately 25' above the numbers centered on 22 with approx ¾ right rudder and slightly left aileron to keep the left wing down, the wind let off causing us to sink faster than I wanted so I added power to approximately 1800 rpm. I then noticed we had drifted to the left side of the runway; at that point I add right aileron to correct to the center of the runway; at that point I decided to do a go around and gave it full throttle at the very same moment a large gust of wind came up and with my left wing now being high due to the previous correction angled us over even more and at that time I went full right rudder and full left aileron with a nose up angle caused the right main landing gear to strike and drag the ground causing it to be removed from the aircraft. We then contacted the ground with no right gear and spun the opposite direction and stopped.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Come in a little faster and use 1 or 2 notches of flaps vs 3.
