Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Right wing and sponson, passenger entry door, nosegear doors damaged by water hydraulic forces

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Departure point; KIPJ (Lincolnton, NC) approximately 1:00 PM. Incident occurred on Lake James, NC during water takeoff, moderate seas (6 inch wave maximum) full throttle ~ 55 Knts. Takeoff speed is ~ 60 knts so we were very close to rotation. Caught a wave that pitched the nose up, actually expected the aircraft to fly away but it settled in for one more touch on the water. When we contacted the water we were immediately thrown into a righthand spin (water loop) and stopped instantly. I am not at this time sure if we hit some floating debris or if the right sponson just caught a wave top but the end result was dramatic. I shut down the engine, turned off all the electrical and checked my passenger to make sure he was okay. Aircraft was not leaking so we started paddling the aircraft to the shore. It was clear from the wing and sponson damage we were not going to fly the aircraft away from the lake. We beached the aircraft and tied it up tightly.
