My wife and I flew from CBE to W42 on 11/26/2015. When we arrived, I topped off both fuel tanks (about 3+ hours of fuel) and tied the plane down for the night. On 11/27/2015 my wife and I intended to return to CBE. When we arrived at W42 I performed a preflight inspection, including a visual of both fuel sight tubes and they both appeared to be full. I did not remove the fuel tank caps or drain any fuel from the sump. We did not smell any fuel odor prior to departure or during flight. About 45 minutes into the flight my wife noticed her sight tube appeared to be empty and I looked at both. Mine appeared to be full, so I expected to have enough fuel for another 1.5 hours. Since the remaining flight time would be about 45 minutes, I was not concerned. When we were about 10 miles from CBE I saw fuel bounce from the bottom of my sight tube and hoped to complete the flight, but started looking for an emergency landing site. I announced on Cumberland CTAF that I was 10 miles out inbound, minimum fuel. At that point the engine began to sputter and I determined where I was going to land, circled the field and attempted to execute an off-field landing. I saw some trees in front of me and tried to make a left turn before touch down and suddenly the plane hit the ground before I straightened the nose wheel. The nose gear buckled and the nose hit the ground. I am not sure whether the left main or nose gear hit first. My wife and I still don't know what happened to the missing fuel.
