Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Front nose wheel, engine components, cowling and both wings. 9Y0 windsack damaged

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Leaving 9Y0 at 11:30, obtained automated weather from KGPZ stating wind from 330 degrees at 10-12 kts. Intended to just fly around the area as a site seeing flight and back to 9Y0. At 11:30 we took off on grass runway 25 with 20 degrees of flaps, at rotation speed of 50 kts or just above we lifted off to about 80'-100' alg. The plane seemed to not be making enough power to continue climbing and at about tree top height a crosswind pushed us left of the runway centerline about 100'. I decided to abort the takeoff and while trying to get back to the centerline to land I struck the windsack forcing me to hard land just short of the left edge of the runway, folding the nose wheel under the plane and slidding it to a stop on its belly. The trees surrounding the airport are very thick and hold the wind back until you rise above the tree tops.
