NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Checked weather through Foreflight prior to departure. Performed a standard pre flight inspection and departed KUDD at 8:00 a.m. on 11/14/2015, on a pleasure flight to KMHT. After gear retraction I noticed an intermittent heavy discharge in the ammeter. I turned off the tail strobe to see if that cured it, but the discharge continued. The gear pump indicator light showed the hydraulic power pack was running though I noted in the gear mirror located on the right wing that the gear was retracted, so I suspected a malfunction. POH indicates this combination usually indicates gear pump is running to add pressure to keep the gear unlocked. I decided to lower the gear and return to KUDD for a precautionary landing. The gear did not lower or raise when "down" and "up" were repeatedly selected. I advised So Cal Approach I could not lower my landing gear and elected to orbit over uninhabited desert north of I-10 while attempting to manually lower the gear. I pulled the circuit breaker and tried to pump the gear down manually. I got only a few strokes before there was no resistance to the pump handle and the gear was only partially deployed. (I could see this in the gear mirror) Continued to pump for over an hour while circling and tried multiple times to get pump to activate electrically. Approach asked if I wanted to declare an emergency and I told them "no" because I wanted to lower the gear manually if at all possible.

After at least an hour of pumping I still felt no resistance from the pump system and observed in the mirror the gear was only partially deployed. I elected to declare an emergency and fly to KPSP where there is emergency equipment, maintenance services, and a paved runway. I obtained landing clearance from the PSP tower which also gave me the current weather. I asked for and received clearance for a low approach to confirm gear position. Flew past the tower and they confirmed that the main landing gear and nose gear were only partially deployed. Flew a right upwind, downwind, and base leg, then turned to final. Lowered flaps and turned off all electrical power, turned off engine when I had the runway "made." Made a tail-low touchdown on the approach end of Runway 31R. Main gear collapsed into gear wells upon landing, nose gear stayed deployed. Plane came to a stop at the intersection of runway 31R and taxiway E. There was no fire, no property damage, and no injuries. The right stabilator tip was wrinkled, the tail cone was cracked, and the main gear was pushed into the gear wells. Front gear was extended. No damage to the propeller observed. PSP fire department responded. PSP airport officials contacted NTSB which gave permission to move the plane. PSP officials contacted Robert Scott, owner of Palm Springs Aircraft Maintenance and an A&P-IA, at my request. He supervised removal to his hangar, located next to Atlantic Aviation at the Palm Springs airport.

KUDD and KPSP are located 13 nm apart in the Coachella Valley of California. The airports are located on a flat valley floor surrounded by mountains to the west, north, and south. To the west is a pass through the mountains, and Interstate 10 runs through this pass into the Los Angeles area. The Salton Sea is located to the east. Interstate 10 bisects the valley. Most of the population lives south of I-10. The north side has a much less dense population and large tracts of open desert.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I won't know until an inspection reveals the reason for the loss of hydraulic pressure in the landing gear system.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

There was some kind of malfunction, but I don't know what it was or its cause.
