NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State time and point of departure, intended destination, and services obtained.

Started plane up and did some taxi test, talked to ground after listening to Martin ATIS. Said I would do one go around and landing, given transponder code for staying in the pattern. Given clearance to taxi to Runway 33. Taxied to RWY 33, did final run-up, controls and instrument check. Called tower and received clearance to take off. Lined up and put in full throttle. Initial glance at airspeed indicated around 45 mph. Plane started to veer to the left, glanced at Airspeed and saw speed over 50 mph. Was approaching the left side of runway and runway light. Attempted to rotate to avoid light and see if plane would straighten out. Got to maybe 3 feet off ground. Then proceeded to nose down, propeller was destroyed and skidded on nose gear. Nose gear fork was bent and pushed into and damaged the firewall.

Return to inspect the plane two days later. Had another pilot with me and we determined that the rudder control horn had been installed upside down. This caused the left turn with right rudder input.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Verify proper control connections after maintenance. If needed have a second set of eyes to validate work. Possibly install/use some type of mirror to see rudders and elevator to ensure proper movement.
