

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

Nearest City/Place: Dothan State: AL

ZIP: 36350 Country: United States

Latitude: 31:19:15.7 Deg N Longitude: 085:26:58.1 Deg W

(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

Date: 01/12/2016 Local Time: 1018

mm/dd/yyyy

Time Zone: CT

Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

Registration Number: N417ER

Manufacturer: Cessna

Model: 172S

Serial Number: 172S11445

Year of Manufacture: 2014

Amateur-Built: ☐ Yes ☒ No If Yes: ☐ Kit/Plans ☐ Original Design Make: _____

☒ IFR-Equipped and Certified

☐ Commercial Space Flight

☐ Unmanned Aircraft

Maximum Gross Weight: 2550 lbs

Weight at Time of Accident/Incident: 2100 lbs

Number of Seats: 3 Flight Crew Seats: 2

Cabin Crew Seats: _____ Passenger Seats: 1

Number of Engines: 1

Category of Aircraft

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Substantial damage to the aircraft's engine firewall and floor boards. Additional damage is noted on the tips of the propeller, evidence of a prop strike on the runway.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On January 12, 2016, at approximately 1118 EDT, Embry-Riddle Aeronautical University (ERAU) solo flight student Jonathan Anglin departed Daytona Beach Airport (KDAB) at 0800 EDT in a Cessna 172/S, N417ER on a cross-country flight to Dothan Regional Airport (KDHN). During touchdown on runway 32 at KDHN the solo student, after bouncing multiple times, experienced a hard landing and propeller strike resulting with no injuries. At the time of the hard landing, Mr. Anglin possessed a private pilot certificate [REDACTED] with instrument rating and was enrolled in the ERAU Part 141 commercial course. Mr. Anglin was able to safely taxi off the runway and park the aircraft at the local Fixed Based Operator (FBO) Walls Aviation LLC. Upon post flight inspection, Mr. Anglin identified propeller damage and immediately notified the ERAU flight supervisor on duty.

The Director of Aviation Safety (DAS) at ERAU spoke with Mr. Anglin regarding the hard landing at KDHN. At the conclusion of the interview, Mr. Anglin stated that he originally planned two routes: Marathon, FL and Dothan, AL. His primary choice was the Marathon, FL route. Due to inclement weather to the south, Mr. Anglin selected his route to Dothan, Alabama. Mr. Anglin stated the air was smooth and that the en route portion flight was uneventful. The reported winds at KDHN at the time of the landing were from 290 degrees at 11 knots. Additionally, during the interview he noted the 0.6% slope gradient of runway 14/32 prior to his departure and was cognizant of the upslope on approach to KDHN. On short final, Dothan Air Traffic Control Tower (ATCT) cautioned N417ER about wake turbulence from a previously departing aircraft. Mr. Anglin proceeded to land, bouncing several times down the runway after his initial touchdown location.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

The hard landing could have been prevented by executing a go-around procedure after initial touchdown. Based on ERAU Flight Data Management (FDM) data it appears that the aircraft landed flat (-1 degree pitch down) on the runway resulting in subsequent bounces shortly after. The proper procedure for this type of landing profile that is consistently taught at ERAU is go-around. As the aircraft continued to bounce down the runway the pilot in command (PIC) should have called "go-around" and attempt the landing a second time.

The Chief Flight Instructor and the Director of Aviation Safety at ERAU will be emphasizing go-around decision making at an upcoming safety presentation for all flight students that will be conducting solo operations. The presentation will emphasize aeronautical decision making (ADM), go-around procedures, loss of control on landing and maintaining positive control. At the conclusion of the safety presentation, ERAU flight students will have an improved level of knowledge regarding the execution of a go-around during landing.
