Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Damage to left wing tip and alieron. Light damage/wrinkles and scuffs to left elevator, possible bent gear leg.
No damage to any airport property.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I departed from KRVS early in the morning between 0800-0900 central time. I verified online sources prior to departure including AOPA flight planning software and aviationweather.gov. Midflight, I made a stop at M19 to take a break and then departed Newport airport around 1155 central time. I obtained VFR flight following services along my entire route. A VFR flight plan was not filed. The intended destination was Decatur, AL. At 1300 central time, I made a fuel stop at Covington, TN M04. I checked the AWOS which reported the winds as light and variable. I noticed the wind sock shifting in speed and direction between 5 knots with gusts upwards of 12-14 knots which did steadily indicate light but was definitely variable. Winds aloft were more gusty in the traffic pattern. I made one go around approach and entered the traffic pattern for a second attempt. During final, winds were direct out of the north. During the landing phase the plane landed smoothly while coordinated on centerline and then the wind shifted 90 degrees to a direct crosswind. I applied corrective control input and braking as the tail started to spin but I was unable to stop the plane from a ground loop. The plane veered to the right off the runway dragging the wing tip on the ground off the runway. The plane rotated about 100-110 degrees and came to a rest. I shut the aircraft engine down and we exited the plane with normal procedures. There was no prop strike, and no injuries to myself or my passenger. After the incident, I started and taxied the plane back down the runway and to the ramp for parking.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Always be prepared for wind shifts and apply proper corrective action before a tailwheel aircraft gets too far out of coordination.
Practice landings in a tailwheel as frequently as possible in different situations.
