Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

Propeller Strike ∴ prop + governor destroyed.
 3 propeller gouges in runway.
 Bottom skin scraped (severely) + all bottom antennae lost
 * Not known if damage minor (?) or severe as both airport personnel, FAA personnel & A&P mechanics unable to decide as "minor" or substantial. All agreed was repairable.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Departed Seligman, AZ (P23) at 1340 MST having received no services there at the unattended facility. Destination was to return home to Prescott, AZ (KPRC) with an initial deviation from P23 to the east toward Flagstaff in order to view area snow coverage recent storms (7 days prior). After flight over area southwest of Flagstaff we turned directly toward Prescott to continue flight home. About 13 miles from destination we listened to ATIS which turned out to be a very long ATIS but containing the necessary and required data. Then contacted KPRC tower and received clearance for RWY 21L with instruction to report 5 miles out. As we continued descent toward airport I listened to ATIS twice more to pick up the information I had earlier received but failed to comprehend the details; even so, my wife/passenger asked that I play it again to assure that we did have the full information.

Just prior to approaching the 5-mi. report point tower contacted me to advise of helicopter & another aircraft, the latter of which would be entering the pattern for RWY 21R. Continuing further as we positioned for 21L we crossed the approach path for 21R as I had begun my G-U-M-P iteration and we continued to look for the approaching aircraft for 21R; seeing none we continued on to flare for landing at 21L not realizing I had failed to lower the gear during that iteration until we had the prop strike and skidded (332') down the runway. Neither I nor my wife, both wearing headsets, had heard the gear horn sound off.

Can't help but feel that the gear-up landing was a combination of some distraction & inattention.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

First and foremost I would seek a series of instructional flights emphasizing airport approach & approach-to-landing procedures. Furthermore, during these flights, I would institute & practice the use of a printed approach-to-landing checklist with the purpose to instill the practice as habit.

Secondly, I would think it advisable to go ahead with installation in-cockpit traffic presentation with ADS-B.
