Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Both wings damaged, rocks penetrated the firewall, propeller severely bent. This is from memory I have not seen a report yet

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The date was 17 February 2016 at approximately 0830. My flight instructor, Daniel Knight, and I preflighted Cessna 172S N35502 as per the checklist. Afterwards we started the airplane, as per the checklist, and then got weather information from ATIS. Shortly after, I contacted ground control requesting taxi instructions. We taxied, took off (From runway 02) and landed the airplane 4 times. The winds were calm and the pattern work was uneventful. Not sure what time, but then I started my first solo. I started the aircraft per the checklist, received updated weather information. The winds were only 6 knots at this time. I taxied to runway 7 and started my solo flight. The first two landings were uneventful. On final approach for my third landing I noticed a slight crosswind had developed. I used rudder controls to maintain centerline and continued to descend. Right before I touched down, while still in ground effect the wind direction and strength changed. Before touching down I corrected, maintaining centerline. Right before touchdown I flared the aircraft, the stalling warning indicator sounded, and I touched down centerline at approx 45 to 50 knots. Everything seemed normal for the first 2 seconds. I picked which taxiway I could exit and started braking. Then the airplane tipped left, then right. After the airplane stopped tipping the airplane got squirrely, turning left then right. I struggled with rudder controls in an attempt to get the aircraft taxiing straight again. At some point the airplane veered right about 45 degrees or so and started going off the runway to the grass. Once the airplane was on the grass I stomped down on the brakes in an attempt to lower ground speed as much as possible. Shortly after that, the airplane rolled right into a ditch. The propeller smacked into the other side of the ditch. After contacting tower that I needed assistance and notifying them I was going to power turn the radio off I started shutdown procedures. I pulled the fuel shutoff valve, leaned the engine mixture, ensured the throttle was at idle, turned the ignition off, ensured all electrical switches were off, turned off the aviations master switch, and then turned off the main electrical switch (alt/batt). Then I slowly exited the airplane with no injuries.
