**Description of Damage to Aircraft and Other Property** *(Use additional sheet if necessary)*

Nose wheel sheered off at touchdown. When the airspeed decreased the nose lowered and the nose strut skidded along the runway until it finally collapsed, allowing the propeller and cowl to touch the runway. The nose strut was pushed back into the firewall.

**NARRATIVE HISTORY OF FLIGHT** *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On March 8, 2016, the owner of the plane, Donald Lee, called to see if I wanted to go for a ride after school. I met him at the Lawrence County Airport (HTW), OH, and we flew up the Ohio River, stopping at the Robert Newlon Airport (I41), WV, on the way back to do a grass field landing.

The following day, March 9th, the weather was clear so I called Don to see if he wanted to fly again. When he said he couldn't I asked our high school art teacher, Tiffany Perry, if she would like to go for a flight? We drove to the Lawrence County Airport, pre-flighted the Remos G3 and discussed safety issues. We then took off at approximately 4:15 pm (EST) and with flight following from Huntington Approach (HTS) flew at 1,000' AGL over the city of Ashland, KY, Russell High School where we work, and then over Mrs. Perry's sister's apartment. We then made three low approaches to Ashland Regional Airport (DWU), and returned to Lawrence County Airport with flight following by Huntington Approach. With the Lawrence County runway in sight we switched to 122.7 and announced we'd be entering a left downwind for Runway 26. Turning final I noticed we were a little fast. The final approach speed for the Remos is 60 MPH (solo) or 65 MPH (with passenger). We were at 75 MPH over the trees at the approach end of Runway 26. I'd seen this speed before and felt it was safe to continue the approach, with the understanding I could easily go-around if needed. I flew the Remos down to the runway holding it in the ground affect to reduce speed. When I felt it was time to land I let the plane settle down to the runway, thinking it was going to be a real smooth landing for my passenger. When the main gear touched the aircraft bounced, I lowered the nose to keep it on the runway. The nose wheel touched the runway first, braking off at the strut and setting off the ELT. I held the nose up until the speed finally bled off causing the strut to impact the runway followed by the propeller. The strut finally collapsed and we then drifted to the left side of the runway and went approximately 15 feet into the grass. At this point the engine intake was clogged by grass and the engine quit running as the plane stopped. I immediately asked my passenger if she was OK and she said yes. I then instructed her to egress and get away from the plane. I switched over to Huntington Approach frequency (119.75) to advise them of the situation, but due to the ELT and line-of-sight issues they couldn't hear me. I then turned off the ignition, avionics and master switches and egressed the plane. Help immediately showed up and we cleared the runway of debris and pushed the aircraft back to the hangar.

Looking back on the incident with 20/20 hindsight I told the FAA inspector that besides being slightly fast on final and not going around I felt another contributing factor was the setting sun. It certainly wasn't the cause, but it was right down the runway about 15 degrees above the horizon and did cause me to squint and made it difficult to see the instrument panel and judge my height above the ground while flaring.

Note: While trying to get all the pertinent information about the plane neither me or the owner could find documentation about the ELT. The Weight and Balance paperwork provided by the manufacturer didn't list it as being installed with the other equipment. However, it did work as advertised. The red light was on and the transmitter was heard over the radio. After I egressed the plane and felt it was safe to return I turned the ELT off.

**RECOMMENDATION (How could this accident/incident have been prevented?)**

Operator/Owner Safety Recommendation

Maintain the recommended airspeed on final! I could have done some "S" turns further out on final to reduce the speed or simply gone around.

**MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)**Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

However, every pilot and mechanic that looked at the nose wheel after it sheered off commented on how weak the design of composite material used in it's construction was. As I understand it all replacement parts will be all metal. I'll attach photos to this form.

**EVACUATION OF AIRCRAFT**Was an emergency evacuation of the aircraft performed? ☒ Yes ☐ No**Method of Exit** – Describe how the occupants exited and how many occupants evacuated each location

When the aircraft came to a complete stop the engine had quit running. I asked the passenger if she was OK. She said yes and I told her to unstrap and get away from the aircraft. I then made an emergency call on the radio to Huntington Approach and then shut off the ignition, avionics and master switches and egressed the plane.
