Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Propeller bent, engine questionable due to propeller strike, spinner and propeller attachment possibly destroyed, fairings on main gear destroyed, main gear bent, canopy destroyed, wing tip and leading edges of wings dented, vertical stabilizer damaged and possibly destroyed, horizontal stabilizer damaged, rutter damaged and possibly destroyed, right fuselage structure bowed and possibly destroyed, roll bars destroyed, complete paint job required, tail antenna destroyed.
seeded grass area disturbed

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

I departed from Joliet airport (KJOT) at approximately 3:15pm heading to Morris airport(C09) and practiced two departures and landings. I, then, headed to Clow airport(1C5) to practice a full stop landing and departure. I landed on 36 runway without incident, turned off onto the taxi way, and taxied back to the threshold for 36 runway. I performed a pre-flight. At 4:15pm, I looked and listened for traffic in the pattern and called stating that RV6 was departing 36 heading to the south to Joliet airport(KJOT). I, then pulled onto 36, centered the plane on the center line and slowly applied power. The airplane was tracking down the center of the runway with no problems. When the plane reached approximately 40-45 MPH it abruptly turned 20-25 degrees to the left. I immediately cut the throttle and applied right rudder to correct the problem. The plane over corrected by 10-15 degrees and I applied left rudder. The plane went approximately 20 degrees to the left. I proceeded to roll off the left side of the landing strip down a 15 foot embankment. At the bottom of the embankment the plane's propeller contacted the ground and the plane flipped over on its back. At that time the canopy and roll bar crushed causing me to hit my head on the ground. At this time I shut off the main power and ignition switch. Within minutes people arrived and helped me out of the plane through the broken canopy. I had severe back pain and minor head/ face lacerations.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

If the area around the runway had been flat, without the embankment, this incident would have been a minor ground loop.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No
