My student and I were practicing landings at Lees Summit Airport (LXT) in N7027F, a Cessna 162 light sport plane. When we got to LXT the ASOS indicated a wind of 060 at 7. Due to construction, runway 11/29 was closed so we used runway 36.

Shortly after entering the pattern, a helicopter, crossed midfield and landed on 36. They announced they were going to sidestep to the west to taxiway A and positioned themselves at the south end of A.

We continued doing touch and goes, announcing our position at least twice each time in the pattern..

On our 7th landing, we had a stabilized approach correcting for a right crosswind. Just before we crossed the threshold, the helicopter started moving north on Alpha. It appeared they turned towards the runway and then stopped. They made no radio calls. My student may have been distracted by it and flared a little high and bounced. I told the student to add a little power to cushion the landing. The plane very rapidly got out of control veering to the right. I took the plane, added power, and turned off the carb heat to do a go around. The student retracted the flaps. I were unable to regain directional control and we were moved/blown off the right or East side of the runway. We hit a taxi light and a taxiway sign. I braked but was unable to stop on the pavement. We coasted to a stop in a grassy area.

This happened about 11:35 AM on April 12, 2016
