NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I left KFTG southbound from the ramp (South A7 at the tower) with clearance from the tower "departure at your own risk". I climbed to 6100ft and continued south for 10 miles over the river area. I practiced 1 approach on the west side of the river but never landed, otherwise just enjoyed flying. I headed back and talked to the tower for entry back into the Delta airspace. I don't remember the information, but I think it was "Juliette." My flight time at that time was 30 min upon returning to KFTG. Traffic was landing on runway 8, and as I remember ATIS noted the winds at around 080 @ 3 knots. After I entered the delta I requested to do hover-work "on the numbers 35." I was "cleared for the option." There was no other traffic on Rwy 17/35. I believe I requested a wind check and heard 080@3kts. Upon my descent to Rwy 35 from west to east, I noted that the winds in that area were not out of 080 and initiated a go around; downwind over Taxiway Delta, left base over D3 to final on Rwy 17. The windsock noted light winds from 170 and I landed on the numbers 35. I lifted from the south end of Rwy 17 and initiated 2 or 3 more patterns just as I had flown on this initial pattern. Each of the patterns had an initial climb to 150-200ft AGL, with the downwind leg at approximately 45-50 kts airspeed. Each of these patterns was uneventful including quickstops to the south end of Rwy17. On my final pattern from base leg to final, I started a descent down the middle of Rwy17 as I had done in the previous patterns. As I was descending, the aircraft yawed to the right, I lowered collective to recover power to the tail rotor, and applied forward cyclic to increase airspeed. This had little effect for LTE, and I continued to yaw to the right now moving toward the grass. Application of left pedal throughout made no difference in correcting the aircraft heading. The aircraft did 2 or 3 360 degree rotations. At approximately 1-2 ft off the ground I pulled collective to try to cushion my landing in the spin. The aircraft rolled to it's left side at the edge of the grass after striking the ground. I was able to crawl out of the aircraft on my own. I called the KFTG tower to report the accident and that I was was down.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I believe that slower airspeed may have contributed to this accident on my turn from base leg to final, along with variable winds and possible gusts. This may have contributed to the LTE that I experienced without an ability to recover the aircraft. I know that my downwind leg was traveling greater than 45kts. I had completed 2 or 3 previous identical patterns. After the accident, and exiting the aircraft I did notice that the winds had become far more variable with gusting that I had not noticed on previous patterns.
