Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Hard landing resulted in damage to the aircraft's firewall. No other damage noticed during subsequent inspection.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On April 27, 2016 I occupied the right seat of a C-172 (N35387.) I was conducting a Private Pilot Practical exam while being observed by my Principal Operations Inspector from the Will Rogers FSDO. My POI occupied the left passenger seat. This practical exam was part of the required observation for my hopeful DPE designation.

The weather was VFR with a light crosswind from the west. I believe winds were reported to be 240 at 7kts at the time of our landings.

The oral portion of the practical exam was successful. I considered the applicant to be well prepared and above average. After the oral exam, I conducted a pre-flight briefing and established the fact that the applicant would be the pilot in command during the flight.

The majority of the flight was uneventful and within PTS standards. On the return trip to the airport, I told the applicant to demonstrate a cross wind landing from a straight in approach to runway 17. During the approach, the applicant seemed to struggle with his crosswind landing technique. He was indecisive with the rudder while over compensating for the crosswind. This being so, he elected to execute a go around procedure from short final.

The second attempt mirrored his first but this time he continued the approach. His airspeed was slower than I preferred but still within safety margins, approximately 60kts. Upon reaching the runway threshold, the applicant suddenly pulled his power to idle. I'm estimating we were approximately 10 to 15 feet off the ground. His sudden reduction in power resulted in an excessive sink rate and subsequent hard landing. We landed on the main landing gear. The aircraft did not hit nose first.

I was able to gain control of the aircraft after the sudden reduction in power but I was unable to do so before the hard landing. I was, however, able to control the airplane after the landing and prevent situation from escalating. I believe my actions were appropriate and as swift as can be expected.

After the landing, I remained in control of the aircraft. I exited the runway and told the applicant that the practical exam was unsatisfactory. I taxied the aircraft to the Southeastern Oklahoma State University maintenance hangar and informed them of the hard landing. A subsequent inspection revealed damage to the aircraft's firewall at the point where the nose gear is attached.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Increased training emphasis on stabilized approaches and crosswind landings. Also, emphasis should be placed on the need to go-around when the outcome of a landing is uncertain.
