N9281R Incident 5-6-16 at appx. 10:15 pm KBMG

VFR flight planning was planned to pick up my son from Lunken (KLUK) airport on round trip cross country. The aircraft was reserved from BMG Aviation in Bloomington, Monroe County Airport (KBMG) around 4:30pm. Weather was reviewed from various internet resources and METAR/Forecasts were noted to be VFR the remainder of the evening. The aircraft was evaluated using the pre-flight checklist prior to departure and no squawks were noted. I departed after clearance from BMG on runway 35 with east turn-out and proceeded on course to KLUK. VFR flight following was established with Cincinnati approach who vectored the course south of KCVG/KLUK. Handoff to KLUK tower was provided and clearance to land on runway 3L at KLUK was completed with ATIS information Quebec. An uneventful landing at KLUK was completed and the aircraft was taxied to the old terminal building for full-stop.

At approximately 8:30pm the preflight inspection, weather, weight/balance and passenger briefing were reviewed. We departed after taxi, run-up and clearance on runway 3R at approximately 9:00pm. Once positive rate of climb and clearance of the airfield, the landing gear was retracted and the gear illumination indicator light changed from green to amber, however, the unsafe gear warning horn persisted. Tower advised handoff to Cincinnati approach and clearance into the class Bravo airspace for direct course to KBMG was granted. The gear was re-extended and the warning horn subsided with the light changing from amber to green. The gear was again retracted, with the light changing from green to amber, and the warning horn again persisted. I again extended the gear and verified with a green light and the warning horn subsided. At this point, I made this decision to ensure that I had a valid gear configuration for landing and to continue to the KBMG destination at 105 knots IAS at 4,500 ft MSL with the gear extended rather than risk a possible stuck "gear up" position. The flight continued on course to KBMG with handoff from Cincinnati to Indianapolis approach. At 10:02 I was handed off with radar service termination 13 miles east of KBMG to contact tower. ASOS information at KBMG was VFR as expected with winds from 220 at 4. I activated the runway lighting system with 7 clicks. Attempt to contact tower to state my intentions to land Rwy 17 for full-stop landing at KBMG were unanswered. A second attempt revealed no answer as well. I assumed after 10:00 the tower was closed and intentions on approach to Rwy 17, left base to final were again transmitted. On final approach, pre-landing checklist and GUMPS check was completed, flaps full and slight sideslip right crosswind control was applied. I noted that to keep the aircraft on the centerline, more left rudder pressure than normal was needed for the small amount of crosswind (04 kts at 220). On short final, minimal rudder authority was required as I approached the runway environment. Normal flare was completed and the aircraft touched down on all three gear. A severe deceleration followed by a loud "thump" was heard, and the aircraft lifted off the runway. Aft yoke and rudder control were applied and the airplane settled down on the runway on the main gear on the centerline. As the nose was lowered, a severe shuttering noise/feel of the nose gear was noted. Aft yoke was maintained as the aircraft was taxied to the ramp, post-landing checklists were completed, and the aircraft was secured and tied down. Final walk around revealed a broken front nose gear and tire, as well as two minimally bent propeller tips. I called the owner of the aircraft at BMG Aviation who advised me to leave the plane tied down in its location and he would be out in the morning as the tower was closed at this time. The following morning, he called me to verify which runway I landed on and that something was missing from the nose wheel. When he called me back, he mentioned he was not able to find this piece, and that a runway check was completed by the local fire department and I was advised to contact the FDSO and was asked to write this report and I was interviewed by telephone.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Ensure there was no nose gear malfunction and land on main gear rather than three point touchdown.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

I do not know if there was a malfunction, however, the gear unsafe warning horn noted in my summary may have indicated a problem contributing to the incident. Inspection will reveal parts if known.
